Acknowledgements

Credits to HoYoverse / COGNOSPHERE as owners of the site studied, to the authors of the libraries it uses, and to the tool maintainers are recorded in the acknowledgements.

Preface

What this handbook describes, what it leaves out, and where its material comes from

Goal

Describe one website, the official **Zenless Zone Zero** site at <https://zenless.hoyoverse.com/zh-cn/main>, at the depth of its public pages — the home page, the character, video, news and world pages, a news article, the company documents, on both its desktop tree and its phone tree — so completely that a reader can build a **child site of the same family**: the same colours, type, rhythm, components, motion, sound and rendering behaviour, from the fixed header to the loader.

The purpose is to see clearly how the site is constructed, not to copy its content.

Explicitly out of scope

- Pages beyond depth 1 on other hosts: the payment and guide pages, the account pages (their links are recorded)
- Other locales (the same build serves them; zh-cn is the one captured)
- The game, its lore and its artwork as subjects in themselves
- Any claim about server-side code: only shipped responses and client code are evidence
- Invented values of any kind: nothing in this handbook is estimated, rounded or assumed

If a statement is not read from shipped code, measured in a browser on the live site, or marked as interpretation, it does not belong in this handbook.

Asset source

The markup, stylesheets, scripts, fonts, images and sounds reproduced here were loaded from the live site and its CDNs on 2026-10-03 and 2026-10-04 and belong to **HoYoverse / COGNOSPHERE**. They are reproduced solely for the study of the site's construction. Nothing in this handbook is a release of those assets.

Preface - continued

Explanation

The handbook is intentionally narrower than a design system. By fixing the subject to one site at one date and admitting only three kinds of evidence, it creates a controlled record in which every colour, size, easing and timing can be traced to a file or a measurement. "Nearly the same looking site" is a statement about that record: build from the rules, specimens and code printed here and the result shares the site's DNA; it does not become the site.

Reading this edition

Evidence labels · specimens · code · where the files are

This is a technical handbook, not a status report. The evidence cutoff is **2026-10-04**, when the live site was captured and measured; the site may change after that date. Four labels mark every claim. **OBSERVED** means read directly from shipped code, stylesheets or server responses. **MEASURED** means reported by headless Chromium driving the live site: clicks, hovers, scrolls, keyboard, resizes and the real-time calculations re-run in the page. **INFERRED** is interpretation and never a fact. **RULE FOR A CHILD SITE** is a transferable instruction derived from the three above.

Where a component could be captured verbatim from the live page it is shown rendered with the site's own stylesheets (the 65 modules printed in Appendix A) at the 1440-wide scale (1rem = 56.25px), followed by its exact markup. The only normalisation is the removal of inline opacity, transform and transition values that Swiper and GSAP write during motion, so each specimen is in its settled state.

Short excerpts of the reconstructed, readable JavaScript sit next to the behaviour they produce; the complete modules are in Appendix B. Minified identifiers were renamed scope-aware; values, strings and control flow are unchanged. Vendor libraries (Vue 2.7, Nuxt 2, vue-router, Vuex, vue-meta, Swiper 4.5.1, GSAP with ScrollTrigger, axios, lodash, date-fns, vant, pdf.js, vuescroll, firebase, the HoYoverse SDKs) are identified, not reprinted.

Large machine-readable archives — the CSS rule database, colour and typography tables, captures, network manifest, module maps — are not reprinted. They are hosted with the live edition of this handbook at <https://sitedna.zenlesszonezero.calyndrae.com> and listed with sizes in Appendix C; every link in the chapters resolves there. The same host carries the originals archive and the self-contained mirror described in the originals chapter: every file the pages load, every CMS answer, the SDK scripts and the record media within the size budget, with the original application served from them on both trees. The source repository is <https://github.com/Calyndrae/Zenless-Zone-Zero-Site-DNA>. The supplied template provides the page layout: its cover, front-matter, body and acknowledgements roles and colours are kept; its wordmark is not.

Use the linked contents pages to open any section directly; the word Contents in every footer returns to them.

Contents

Preface	2
Reading this edition	4
Notice	16
Scope, evidence rules and how to read this page	17
Page graph, routes and data flow	19
Technical structure: Nuxt 2 shell, webpack 4 chunks, injected CSS, SDKs	25
Rendering scale: the rem adapter ($100 \times \text{clientWidth} \div \text{design width}$)	33
Layer stack and hit testing	35
Colour tokens and where each one is used	39
Typography: faces, roles, sizes	44
Columns, spacing scale and section rhythm	50
Header: logo, navigation, more-menu, download, music, share, account	52
First-load screen: the shell loader and the Vue loader	65
Home hero (home-kv): key visual, play button, download panel	71
Sidebar pager: six section numbers, prev/next, scroll-driven active state	80
Home character section: faction nav swiper + fade list swiper	83
Home video section: fade carousel, thumbnail nav, overlay player	90
Home news section: looping banner carousel with bullets and a scrolling summary	95
Home world section: looping banner swiper with prev/next	99
Home feature section: concept block, feature fade swiper, concept video	102
Footer: back-to-top, social bar, subscription widget, HoYoverse footer and locale picker	105
Character page (/zh-cn/character): fade stage, pagination, voice player, faction rail	129

Contents - continued

Video page (/zh-cn/video): latest slider, category tabs, paged grid, overlay player	140
News index (/zh-cn/news): latest slider, tabs, paged list	150
News article (/zh-cn/news/:id) — the template this page runs in	159
World page (/zh-cn/world) and world entries (/zh-cn/world/:id)	165
Company documents (/zh-cn/company/privacy, /terms): the protocol template and the PDF viewer	180
Redemption page (/redemption): a separate build on the same host	183
Phone tree: /m routes, the m-header and its menu, the rem adapter at 750	185
Phone home: KV, section nav, character, video, news, world, feature, pre-register	201
Phone inner pages: character, video, news, article, world, world entry, company	217
Buttons and controls inventory	236
Hover and active states: complete inventory	239
Motion: keyframes, transitions and measured timelines	250
Audio: background music, the voice player, mute state	257
Imagery: bundled assets, CMS images, data URIs, icon font	259
Responsive behaviour: two trees, four media queries, measured widths	262
Internationalisation: mi18n dictionaries, language fonts, locale routing	263
JavaScript map: chunks, modules, readable reconstructions	266
Components declared in CSS but not rendered on the captured pages	281
Coverage matrix: every CSS block and where it is used in this handbook	288
Build a child site: the transferable rules	302
Interactions measured live: clicks, hovers, scroll, keyboard, resize, real-time calculation	303

Contents - continued

Originals archive and self-contained mirror: the real files, data and pages on this host	318
Visual record: every captured screenshot	323

Notice

Ownership of the material reproduced · what the reconstruction is and is not · how the template is used

The website studied here, its name, characters, artwork, music, fonts, code and all other material belong to HoYoverse / COGNOSPHERE and their licensors. This handbook reproduces parts of that material for the purpose of describing how the site is built. It is not endorsed by, affiliated with or published on behalf of the site's owners.

The readable JavaScript in Appendix B is a reconstruction: the shipped minified modules with their identifiers renamed for reading. It is not the site's source code and must not be presented as such. The stylesheets in Appendix A are the shipped css-loader modules reformatted.

The page layout, beige front matter, body pages and acknowledgements treatment are adapted from the supplied template. The template's publisher did not author, publish or endorse this handbook, and no mark of theirs appears in it.

Measurements describe the site as it answered on 2026-10-03/04 to one headless Chromium build in one container (no H.264 decoder, no GPU, no real pointer). Where that environment limited a measurement — the overlay video players opened but created no player element, and the character stage did not react to synthetic clicks — the limit is stated in place, and the mirror on the hosted site renders those parts in any normal browser from the archived files.

Scope, evidence rules and how to read this page

Chapter 01 · 2 observed · 0 measured · 0 inferred · 0 rules

This handbook describes the Zenless Zone Zero official website at **<https://zenless.hoyoverse.com/zh-cn/main>** to a depth of one navigation step, on both of its trees: the desktop tree under /zh-cn/... and the phone tree under /m/zh-cn/... that the site itself serves to mobile user agents. 17 desktop pages and 9 mobile pages were captured in headless Chromium on 2026-10-03; every number, class name, colour and file name in these chapters comes from the shipped code, from the responses the pages received, or from measurements taken in that browser.

OBSERVED — Desktop pages captured: redemption, /zh-cn/character?id=166076, /zh-cn/company/privacy, /zh-cn/company/terms, /zh-cn/main, /zh-cn/news, /zh-cn/news/166475, /zh-cn/news/166476, /zh-cn/news/166496, /zh-cn/news/166497, /zh-cn/news/166498, /zh-cn/news/166535, /zh-cn/video, /zh-cn/world, /zh-cn/world/102173, /zh-cn/world/102257, /zh-cn/world/102370.

OBSERVED — Mobile pages captured (iPhone user agent, 390×844 CSS px, device pixel ratio 2): /m/zh-cn/character, /m/zh-cn/company/privacy, /m/zh-cn/company/terms, /m/zh-cn/main, /m/zh-cn/news, /m/zh-cn/news/166535, /m/zh-cn/video, /m/zh-cn/world, /m/zh-cn/world/102370.

How to read: **OBSERVED** = read from shipped code or responses · **MEASURED** = reported by headless Chromium · **INFERRED** = interpretation, never a fact · **RULE FOR A CHILD SITE** = transferable instruction derived from the above. Where a value is given in rem, the root font-size is the one the site computes from the viewport (chapter on rendering scale); the bracketed pixel values are for a 1440 px wide desktop window and a 390 px wide phone.

What is not in scope: the pages behind the "更多" (more) menu that live on other hosts (充值 at sdk.hoyoverse.com/payment, 攻略 at act.hoyolab.com), the account pages at account.hoyoverse.com that open in an iframe when the user icon is clicked, and the game itself. The redemption page at /redemption is on this host but is a separate build (it loads its own bundles from act.hoyoverse.com); it is described where the nav reaches it and archived with the originals.

Scope, evidence rules and how to read this page - continued

Where the evidence lives on this host

Folder	Contents
capture/	network manifest (850 responses), the 51 chunks of the build, the 65 stylesheets extracted from them, per-page DOM snapshots, screenshots, computed styles, hover diffs, style-mutation timelines, media logs, and the interaction measurements (interactions.json)
source/	beautified chunks, 1,457 split webpack modules, the module map, the Nuxt route table and the readable reconstructions of the first-party modules
analysis/	every CSS rule with its media context, colour, typography, spacing, layer and motion tables, hover states, per-component evidence files
archive/ and / nuxt/	the originals: every file the pages load, every API and i18n answer, kept verbatim with digests (chapter on the originals archive)

Page graph, routes and data flow

Chapter 02 · 4 observed · 2 measured · 0 inferred · 1 rules

The site is a single-page application: one HTML shell is served for every path, and **vue-router** (history mode) decides which page component to mount from the route table compiled into the client bundle. The table below is the shipped route table (41 records), read from [/nuxt/be1f69b.js](#); each record names the webpack chunks the router downloads before mounting the page and the module id of the page component.

Path	Route name	Chunks loaded on demand	Page module

OBSERVED — The `:lang` segment is the locale (`zh-cn` here; the same table serves every language). Desktop and phone are two parallel trees: `/:lang/...` and `/m/:lang/...`; the inline script in the shell head sends phone user agents to the `/m/` tree before Vue starts, which is why the phone capture of `/zh-cn/main` landed on `/m/zh-cn/main`.

Page graph, routes and data flow - continued

The header navigation and where each entry goes

MEASURED — Header entries at 1440 wide: 首页 · 角色介绍 · 影像资料 · 新闻资讯 · 设定档案 · 更多 · 立即下载. Clicking 角色介绍 / 影像资料 / 新闻资讯 / 设定档案 changed the route to /zh-cn/character, /zh-cn/video, /zh-cn/news, /zh-cn/world without a document reload (performance navigation entries stayed at 1), in 1971 ms, 1807 ms, 1649 ms, 1425 ms from click to route change. The logo click from /zh-cn/video returned to /zh-cn/main.

MEASURED — Hovering 更多 opens a sub-menu with 3 links: 兑换码

<https://act.hoyolab.com/zzz/event/e20240601-guide-c0k2vt/index.html>.

Content comes from one CMS API

OBSERVED — Every list and article on the site is fetched at run time from `<strong>https://sg-public-api-static.hoyoverse.com/content_v2_user/app/3e9196a4b9274bd7</strong>` with three GET endpoints: /getContentList (paged lists of a channel), /getContent (one record with its neighbours when iAround=1) and /getChildTree (the sub-channels of a channel). The parameter names are the API's: iChanId, iPageSize, iPage, iInfoId, iAround, sLangKey.

Channel id	Used for	Request the pages made
285	home key visual (hero slides)	<code>getContentList?iChanId=285&iPageSize=1&iPage=1</code>
286	character factions (camps)	<code>getContentList?iChanId=286&iPageSize=50&iPage=1</code>
287	characters	<code>getContentList?iPageSize=200&iPage=1&iChanId=287</code>
288	news, all categories	<code>getContentList?iPageSize=7&iPage=1&iChanId=288</code> (home), <code>?iPageSize=9</code> (news index), <code>getChildTree?iChanId=288</code>
295 / 296 / 297	news tabs 新闻 / 公告 / 活动	<code>getContentList?iPageSize=9&iPage=n&iChanId=295 296 297</code>
290	world (设定档案) entries	<code>getContentList?iPageSize=10&iPage=1&iChanId=290</code>
1332	videos; sub-channels 1338–1341 are the tabs	<code>getContentList?iPageSize=9&iPage=1&iChanId=1332</code> , <code>getChildTree?iChanId=1332</code>
292	social follow links	declared in the constants module

Page graph, routes and data flow - continued

Channel id	Used for	Request the pages made
293 / 294	terms of service / privacy policy documents	getContentList?iPageSize=1&iPage=1&isPreview=0&iChanId=293 294

OBSERVED — A list answer is {retcode, message, data:{iTotal, list:[...]}}; each record carries sChanId[], sTitle, sIntro, sUrl, sAuthor, sContent (HTML), sExt (a JSON string of named images and fields), dtStartTime, dtEndTime, dtCreateTime, iInfoId, sTagName[], sCategoryName, sSign. /getContent adds around:{prevContent, nextContent}. The news index reported iTotal = 1535 records on 2026-10-03.

Code — readable/site-config-constants.28.js lines 5–44 (readable reconstruction of the shipped module; values and control flow unchanged):

```
* Build-time environment configuration module (ES module with named exports). It defines the pr
  oduction/sea environment flags, the HoYoverse API base URLs (content_v2_user static content AP
  I, the e20220610reserve event API, sg-public-api IP API, account management site), the gacha p
  robability page URL and GACHA_ID 123483, the landing URL https://zenless.hoyoverse.com, the co
  ntent CHANNEL_ID_CONFIG map (social follow 292, KV 285, news 288/295/296/297, protocol pages 2
  94/293/303/305/789/836, character camp 286 / character 287, feature 289, world 290, video 1332
  /1337), INFO_ID_CONFIG (FUND 123774, ABOUT 123763) and the account SDK app id.
*
* Exports (minified key → meaning):
*   environment → build environment name ("production")
*   i18nEnv → i18n region environment ("sea")
*   isSea → boolean flag that this is the overseas (sea) build
*   apiBase → content_v2_user static content API base URL
*   normalBase → e20220610reserve event API base URL
*   accountMangementUrl → HoYoverse account management site URL
*   ipApiBase → sg-public-api base URL used for IP/region lookups
*   gachaUrl → gacha probability static page URL
*   GACHA_ID → content id of the gacha probability entry
*   LANDING_URL → official site landing URL
*   CHANNEL_ID_CONFIG → map of content channel ids (social, KV, news, protocol, character, feat
  ure, world, video)
*   INFO_ID_CONFIG → map of single content info ids (FUND, ABOUT)
*   accountSdkAppId → HoYoverse account SDK app id
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
  nd
* control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
.

Code — readable/protocol-CMS-API.1118.js lines -11–12 (readable reconstruction of the shipped module; values and control flow unchanged):

Everything else the pages request

Host	Responses	What it serves
fastcdn.hoyoverse.com	467	images and videos of the CMS records, i18n JSON
zenless.hoyoverse.com	97	the shell, the /_nuxt/ chunks, fonts and images bundled with the build
www.google-analytics.com	72	GA4 hits (G-4MDLY4VQB3, G-8BR44XDKVQ)
log-upload-os.hoyoverse.com	53	event log upload
webstatic.hoyoverse.com	51	HoYoverse SDK scripts (account, footer, analysis), i18n JSON, SDK images, background music
sg-public-api.hoyoverse.com	27	ip_location (region), subscription account index
apmplus.ap-southeast-1.volces.com	27	APM settings and monitor collect (aid 1000089)
sg-public-api-static.hoyoverse.com	24	the CMS API
www.googletagmanager.com	15	gtag.js
act.hoyoverse.com	8	APM helper SDK and the redemption app bundles
sg-public-data-api.hoyoverse.com	3	device fingerprint
act-webstatic.hoyoverse.com	2	application ×1, font ×1
passport-api-sg.hoyoverse.com	1	cookie-token verification (account SDK)
sdk-os-static.hoyoverse.com	1	application ×1
minor-api-os.hoyoverse.com	1	h5 log batch
gs.hoyoverse.com	1	application ×1

Page graph, routes and data flow - continued

OBSERVED — Internationalisation strings are not in the bundle: the mi18n loader fetches JSON dictionaries per language from `webstatic.hoyoverse.com/admin/mi18n/...` and `fastcdn.hoyoverse.com/mi18n/...` (the m... ids in the manifest); the page text, nav labels and SDK strings are read from them with `$getI18nWord(key)`.

RULE FOR A CHILD SITE — Build the child site as an SPA shell plus a content API with the same three verbs and the same record shape; keep the channel ids as configuration (the constants module shows the complete map), keep text in per-language JSON dictionaries, and keep the phone tree as separate routes rather than a responsive variant of the desktop pages.

Technical structure: Nuxt 2 shell, webpack 4 chunks, injected CSS,...

Chapter 03 · 4 observed · 0 measured · 0 inferred · 1 rules

OBSERVED — Stack read from the shipped code: Nuxt 2 in SPA mode (window.__NUXT__ holds only {config:{_app:{basePath:"/",assetsPath:"/_nuxt/",cdnURL:null}}}, no server-rendered state), Vue 2.7.4 runtime, vue-router, Vuex, vue-meta (the data-n-head attributes in the shell), webpack 4 (window.webpackJsonp chunk loading, public path "/_nuxt/"), Swiper 4.5.1 for every carousel, GSAP with ScrollTrigger for scroll-driven motion, axios behind a HoYoverse request layer, lodash, date-fns, vant and pdf.js inside the vendor bundle, and the HoYoverse SDKs loaded as separate scripts: jquery 1.11.1 (dependency of the SDK scripts), hoyoverse-account-sdk, hoyoverse-footer, analysis v2, and the APM helper.

The shell (one file for every route)

The server answers every path with the same 8 KB document: meta tags, the loading placeholder with an inline <style> element, the SDK scripts, the four entry scripts and the APM bootstrap. The archived copy is [original/shell-response.html](https://webstatic.hoyoverse.com/dora/biz/analysis/v2/main.js); its head script order is the one below.

```

OBSERVED — Module kinds after splitting the chunks: vendor 995, site 85, css-module 65, site-vendor 15, asset-url 154, unresolved 109, site-page 34. The complete naming is in source/MODULE-MAP.md; the first-party modules (pages, layout components, store, API client, plugins) are reconstructed readably under

Technical structure: Nuxt 2 shell, webpack 4 chunks, injected CSS,...

source/readable/.

CSS is shipped inside the JavaScript

OBSERVED — There is no stylesheet file: 65 css-loader modules (723 KB of CSS) are strings inside the chunks, and vue-style-loader appends one `<style>` element per module to the head when the module executes. The home page therefore ends with 53 `<style>` tags (511 KB); the news article page with 46. 14 of the modules are Vue scoped styles (selectors carry a `[data-v-...]` attribute). Each extracted stylesheet is at `capture/css/<module id>.css`, byte for byte what the browser receives, with the `url()` targets resolved the way `css-loader` resolves them at run time.

The Vuex store

OBSERVED — State keys read from the running store on the home page: lang, mi18n, isLoading, bgmMuted, newsCates, videoCates, videoMainChanName, characterCamps, navSection, homeSection, routePage, homeScroll, baseInfo, userInfo, isEnIp, newsCache. Mutations seen in the components: setUserInfo, setBaseInfo, setLoading, setHomeSection, setNewsCates, setVideoCates, setVideoMainChanName, setCharacterCamps, muteBgm.

Technical structure: Nuxt 2 shell, webpack 4 chunks, injected CSS,...

Code — readable/header-bar.348.js lines 44–65 (readable reconstruction of the shipped module; values and control flow unchanged):

```
computed: {
  lang: function () {
    return this.$store.state.lang;
  },
  volume: function () {
    return this.$store.state.bgmMuted ? 0 : 0.8;
  },
  homeSection: function () {
    return this.$store.state.homeSection;
  },
  userInfo: {
    get: function () {
      return this.$store.state.userInfo;
    },
    set: function (userInfoValue) {
      this.$store.commit("setUserInfo", userInfoValue);
    },
  },
  userName: function () {
    var currentUserInfo;
    return (
      (null === (currentUserInfo = this.userInfo) || void 0 === currentUserInfo
```

RULE FOR A CHILD SITE — Reproduce the delivery model, not only the look: an SPA shell served for every path, a runtime chunk plus two vendor bundles and one app bundle, route chunks loaded by the router, CSS injected per component, SDK scripts loaded before the app, and a loading placeholder in the shell so the first paint is not blank.

Rendering scale: the rem adapter ($100 \times \text{clientWidth} \div \text{design width}$...

Chapter 04 · 2 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — Every length in the stylesheets is in rem. A plugin in the app bundle (module 326) sets the root font-size from the viewport: $\text{fontSize} = 100 \times \text{clientWidth} \div \text{designWidth}$, with the design width 2560 for the desktop tree and 750 for the phone tree. On desktop the client width is clamped to [1440, 2560] before the division (minScaleWidth 1440, maxFillWidth 2560), so a window narrower than 1440 px keeps the 1440 layout and scrolls horizontally rather than shrinking; on phones the height (designHeight 1334) is used in landscape. The plugin also adds the class pc or mo to <html>, adds hairlines when the device pixel ratio is at least 2, and only then sets #__nuxt visible.

Code — readable/rem---device.326.js lines 1–14 (readable reconstruction of the shipped module; values and control flow unchanged):

```
/**
 * rem---device — readable reconstruction of webpack module 326 (chunk 8c4c131.js)
 * Original: https://zenless.hoyoverse.com/_nuxt/8c4c131.js
 *
 * Nuxt client plugin that sets up responsive rem scaling (a lib-flexible variant) and device de
 * tection. It reads device info from a device-utils module (`getDeviceType`, `ios`, `android`, `
 * samsungTablet`, `getOrient`), adds a `mo` or `pc` class to `<html>`, and computes the root fon
 * t-size from `clientWidth` against a design width (750x1334 for mobile with landscape handling,
 * 2560 with min-scale 1440 for PC), correcting for older Android Chrome (<79) font-size clampin
 * g, recalculating on `resize`/`pageshow`, adding a `hairlines` class on high-DPR screens, and r
 * evealing `#__nuxt`. It injects `$flex` (a getter for `rem`, `deviceType`/`device`, `clientType
 * `, `pc`, `mobile`/`mo`, `samsungTablet`) and `$qs` (the qs library).
 *
 * Exports (minified key → meaning):
 *   a → the Nuxt plugin function (context, inject) registering $flex and $qs
 *
 * Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
 * nd
 * control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
 *
 */
// module 326 from 8c4c131.js
// deps: 224, 556, 204, 321, 299
```

Viewport	clientWidth	Measured html font-size	$100 \times \text{width} \div 2560$	Clamped to 1440?
2560×1440	2560	100px	100px	no
1920×1080	1920	75px	75px	no
1440×900	1440	56.25px	56.25px	no
1280×720	1280	56.25px	50px	yes 56.25px
1024×768	1024	56.25px	40px	yes 56.25px
800×600	800	56.25px	31.25px	yes 56.25px

Rendering scale: the rem adapter ($100 \times \text{clientWidth} \div \text{design wi...}$)

Phone viewport	clientWidth	Measured html font-size	$100 \times \text{width} \div 750$
390×844	390	52px	52px
375×667	375	50px	50px
430×932	430	57.3334px	57.3333px
768×1024	768	102.4px	102.4px

MEASURED — So 1rem = 56.25px at 1440 wide, 75px at 1920, 100px at 2560 (the design canvas); 1rem = 52px on a 390 px phone. The design files were drawn at 2560 × 1440 (desktop) and 750 × 1334 (phone): a value of .46rem in the CSS is 46 px in the design and 25.88 px on a 1440 window.

CSS value	Design px (2560)	At 1440 wide	At 1920 wide	Phone (390)
.16rem	16	9	12	8.32
.2rem	20	11.25	15	10.4
.24rem	24	13.5	18	12.48
.3rem	30	16.88	22.5	15.6
.46rem	46	25.88	34.5	23.92
1rem	100	56.25	75	52
3.4rem	340	191.25	255	176.8
12.8rem	1280	720	960	665.6
19.2rem	1920	1080	1440	998.4

OBSERVED — The base stylesheet still declares `html{font-size:14px}` (module 202, the vendor reset); the inline style the plugin writes on `<html>` overrides it on every page load and on every resize and pageshow event.

RULE FOR A CHILD SITE — Use the same adapter: author in rem against a 2560-wide (desktop) and 750-wide (phone) canvas, set `html font-size = 100 × clientWidth ÷ designWidth` on load, resize and pageshow, clamp the desktop width to [1440, 2560], and hide the app root until the first value is written.

Layer stack and hit testing

Chapter 05 · 1 observed · 1 measured · 1 inferred · 0 rules

OBSERVED — 160 rules set a z-index. The stack, highest first (vendor and SDK layers included because they sit above the site):

MEASURED — On the home page at 1440×900 the fixed header is 1440×56 px (1rem high) at the top, the sidebar pager sits fixed at the right edge ($46.125\text{px} \times 201.375\text{px}$), and the sections scroll beneath them; the loading overlay (.zzz-loading in the shell, then the Vue .loading component) covers the viewport at z-index 997 until the page component has mounted.

INFERRED — The order is: content (auto) sticky/fixed page chrome (header 99, sidebar 99, backTop) SDK overlays (account popup, cookie tips, toast) nuxt-progress 999999 the user-model loading overlay at 2147483646/7, which is the request layer's own blocking spinner.

Colour tokens and where each one is used

Chapter 06 · 2 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — 278 distinct colour literals occur in the stylesheets. The site's own palette is small: ink #222122 and near-blacks (#000, #111, #333), the signal yellow-green #d8fa00 (sidebar active number, borders, highlights) and its button variant #c6e800, warm yellow #ffde00, light greys #e8e8e8 / #efefef / #d6d6d6 for panels and page background, white. Most of the remaining literals are HoYoverse SDK tokens (the --global-color-* and --brand-* custom properties of the subscription/CRM widget).

Colour	Occurrences	Properties	Components	Example
#fff	77	background-color, color, background	mhy-bridge-message-box-mask, error, nuxt-progress, more-btn	.mhy-bridge-message-box-mask .mhy-bridge-message-b
#000	61	background-color, color, background	error, header, m-header, swiper-pagination-bullet	.error__btn

OBSERVED — CSS custom properties declared on :root (the hyv design tokens shipped with the CRM widget, module 1056): --global-color-coolgrey-0: #e6ebff; --global-color-coolgrey-1: #d7dff9; --global-color-coolgrey-2: #c7d1f0; --global-color-pink-0: #ffdbf9; --global-color-pink-1: #ffbdf1; --global-color-pink-2: #ff9ee5; --global-color-cyan-0: #c2fffd; --global-color-cyan-1: #a4fdff; --global-color-cyan-2: #85f7ff; --global-color-green-0: #f2fdfa; --global-color-green-1: #e5fbf3; --global-color-green-2: #caf6e6; --global-color-green-3: #b0f2d8; --global-color-green-4: #96eec8; --global-color-green-5: #7beab6; --global-color-green-6: #4eda99; --global-color-green-7: #2cc98a; --global-color-green-8: #2db47e; --global-color-green-9: #2d9f71; --global-color-green-10: #2b826b; --global-color-red-0: #fef2f0; --global-color-red-1: #fee4e1; --global-color-red-2: #fcccca; --global-color-red-3: #fbb8b1; --global-color-red-4: #faa199; --global-color-red-5: #f88b81; --global-color-red-6: #f6675a; --global-color-red-7: #ea473e; --global-color-red-8: #da322f; --global-color-red-9: #c72329; --global-color-red-10: #a8242d; --global-color-purple-0: #cac7ff; --global-color-purple-1: #b1a9ff; --global-color-purple-2: #9b8aff; --global-color-orange-0: #fffcf0; --global-color-orange-1: #fff7e0; --global-color-orange-2: #ffefc7; --global-color-orange-3: #ffe5ad; --global-color-orange-4: #ffda94; --global-color-orange-5: #ffcc7a

MEASURED — Page background measured on the home page body: rgba(0, 0, 0, 0); header text colour rgb(0, 0, 0); sidebar active number rgb(216, 250, 0).

RULE FOR A CHILD SITE — Keep four roles: ink (#222122) on light grey (#e8e8e8–#efefef) for reading surfaces, black panels (#000/#111/#222122) for the hero and the header, the yellow-green #d8fa00 only as the accent (active state,

Colour tokens and where each one is used - continued

borders, highlights) and #c6e800 for hover on filled buttons, white for text on dark.

Typography: faces, roles, sizes

Chapter 07 · 3 observed · 0 measured · 0 inferred · 1 rules

OBSERVED — 22 @font-face declarations ship in the app bundle (modules 685 and 703 are the same font set for the desktop and the phone layouts). The faces are keyed by language: "en impact" and "en inpin" for Chinese/English display and body text, "ko scd" (S-Core Dream 9) for Korean, "ja rog" (Ro G San Serif) for Japanese, "tw cloud" for Traditional Chinese, plus the Kanit family from fastcdn for Thai, TTHovesProCompactBold, Mont-Heavy (inlined as a data: URI), and the icomoon icon font (inlined as a data: URI).

font-family	Files	Weight	Declared in

OBSERVED — The body font stack on the home page as computed: "en inpin", "Helvetica neue", "PingFang SC", "Hiragino Sans GB", "Microsoft YaHei UI", "Microsoft YaHei", Arial, "sans-serif". Text set in the key visual, section titles and numbers uses the classes font-num, font-mont-heavy and font-hongmeng; the mi18n loader exposes the language font as the custom property --mi18n-font-css, which the component rules combine with the display face ("en impact", var(--mi18n-font-css) !important).

RULE FOR A CHILD SITE — Load the display face per language and fall back to the language font variable; keep the scale in rem on the 2560 canvas

(.16/.18/.2/.22/.24/.28/.3/.32/.42/.46rem are the steps that recur) and keep reading text at line-height 1.5 and headings at 1 to 1.3.

Columns, spacing scale and section rhythm

Chapter 08 · 1 observed · 1 measured · 1 inferred · 1 rules

MEASURED — At 1440 × 900 the desktop content column is 1080 px wide (19.2rem) centred in the 1440 window: the header inner wrapper, every home section and the footer social bar share it. The home sections stack to 4835 px: index 865 px, character 690 px, video 667 px, news 687 px, world 599 px, feature 861 px; header 56 px, footer 424 px. The news article column is 12.8rem (720 px at 1440) with 2.6rem padding above.

OBSERVED — Spacing values that recur in the stylesheets: margin: 0 auto (31); margin: 0 (21); padding: 0 (19); margin-left: 0 (15); padding: 0 .14rem (12); margin-left: .26rem (11); margin-top: .6rem (10); margin-top: 1rem (10); margin-top: .4rem (10); margin-top: .1rem (9); margin-right: .22rem (8); margin-left: .2rem (7); margin-right: 0 (7); margin-top: .7rem (7); padding: 0 .2rem (6); padding: 0 .1rem (6); margin-top: 1.1rem (6); margin-top: 0 (6); margin-bottom: .1rem (5); margin: .9rem 0 (5); padding: 0 .4rem (5); margin-right: .02rem (4); margin-top: .2rem (4); margin: 0 !important (4).

Declaration	Rules	At 1440 wide
margin: 0 auto	31	margin: 0 auto
margin: 0	21	margin: 0
padding: 0	19	padding: 0
margin-left: 0	15	margin-left: 0
padding: 0 .14rem	12	padding: 0 7.88px

margin-top: .7rem	7	margin-top: 39.38px
padding: 0 .2rem	6	padding: 0 11.25px
padding: 0 .1rem	6	padding: 0 5.63px
margin-top: 1.1rem	6	margin-top: 61.88px

Columns, spacing scale and section rhythm - continued

Declaration	Rules	At 1440 wide
margin-top: 0	6	margin-top: 0
margin-bottom: .1rem	5	margin-bottom: 5.63px
margin: .9rem 0	5	margin: 50.63px 0
padding: 0 .4rem	5	padding: 0 22.5px
margin-right: .02rem	4	margin-right: 1.13px
margin-top: .2rem	4	margin-top: 11.25px
margin: 0 !important	4	margin: 0 !important
margin-top: .06rem	4	margin-top: 3.38px
margin-right: .4rem	4	margin-right: 22.5px
margin: 1.1rem auto 0	4	margin: 61.88px auto 0
padding: .9rem .4rem	4	padding: 50.63px 22.5px
padding-left: 10px	4	padding-left: 10px
margin-top: .18rem	4	margin-top: 10.13px

INFERRED — The rhythm is built on tenths of a rem (0.1rem = 10 design px):
.1/.2/.4/.6/1rem margins between blocks, .14/.26rem gutters inside controls; sections on the home page are not equal in height but each is a full composition that the sidebar pager scrolls to as a unit.

RULE FOR A CHILD SITE — Keep a 1080-px-wide (19.2rem) centred column for desktop chrome and lists, a 12.8rem reading column for articles, and spacing in multiples of .1rem.

Header: logo, navigation, more-menu, download, music, share, ac...

Chapter 09 · 1 observed · 5 measured · 0 inferred · 1 rules

OBSERVED — The header is the layout component header-bar (module 348, readable source): a fixed bar 1rem high across the full width, with a 19.2rem inner wrapper that holds the logo (two images, logo-big and logo-sm, swapped with the logoBig/logoSmall transitions as the page scrolls), the left navigation (ltNav from getLtNavs: 首页, 角色介绍, 影像资料, 新闻资讯, 设定档案, 更多, 立即下载) and the right tools (rtNav: the background-music toggle m-audio-player, the share button, the account icon). The nav items are divs with click handlers (handleNavClick \$router.push), not links, so they do not appear in the page's anchor list.

MEASURED — At 1440 × 900 the header box is 1440 × 56 px; the inner wrapper is 1080 px; nav labels are font-size 11.25px, color rgb(0, 0, 0), font-family "Helvetica neue", "PingFang SC", "Hiragino Sans GB", "Microsoft YaHei UI", "Microsoft YaHei", Arial, "sans-serif"; the logo image is 129 × 30 px; the BGM, share and login icons are 33 × 33 px at x = 1080, 1142 and 1196.

home page at 1440 × 900 with the header, hero and sidebar

Header: logo, navigation, more-menu, download, music, share, ac...

Specimen — header inner wrapper (nav + tools) — the bar itself is position:fixed, so its inner wrapper is embedded

The nav-content divs are the clickable entries; the sub-menu of 更多 is in the DOM at rest and shown on hover.

Markup (verbatim from the live page; animation inline styles removed):

```

MEASURED — Hovering 更多: the sub-menu (.nav-content-sub) becomes block with 3 entries (兑换码, 充值, 攻略); 兑换码 and 充值 are plain links to /redemption and /payment, 攻略 opens the HoYoLAB guide.

MEASURED — The music toggle: store.bgmMuted was false before the click and false after it in headless Chromium (no audio element exists in the DOM; the player is the @me/audio library behind m-audio-player, and the muted choice is persisted in localStorage as napSeaBgAudioOfficial={"createdTime":1791070694320,"cacheTime":0,"data":false}). The icon class is m-audio-player__icon with the heartbeat

Header: logo, navigation, more-menu, download, music, share, ac...

animation while active. The track itself is https://webstatic.hoyoverse.com/upload/static-resource/2022/04/19/aeefeb96a2a294cf1d7ab7324fd9a492_568718570249589416.mp3 (3.4 MB).

MEASURED — Hovering the share icon shows .share__panel (display block, height 200.75px) with the social items of the footer SDK (Twitter, Youtube, TikTok, Discord, Instagram, HoYoLAB, Twitch, Telegram).

MEASURED — Clicking the account icon opens the HoYoverse account SDK in an iframe: https://account.hoyoverse.com/login-platform/index.html?st=https%3A%2F%2Fzenless.hoyoverse.com%2Fzh-cn%2Fvideo&token_typ.

account login iframe after clicking the user icon

Code — readable/header-bar.348.js lines 39–68 (readable reconstruction of the shipped module; values and control flow unchanged):

```
    ltNav: this.getLtNavs(),
    rtNav: this.getRtNavs(),
    downloadIns: null,
  };
},
computed: {
  lang: function () {
    return this.$store.state.lang;
  },
  volume: function () {
    return this.$store.state.bgmMuted ? 0 : 0.8;
  },
  homeSection: function () {
    return this.$store.state.homeSection;
  },
  userInfo: {
    get: function () {
      return this.$store.state.userInfo;
    },
    set: function (userInfoValue) {
      this.$store.commit("setUserInfo", userInfoValue);
    },
  },
},
userName: function () {
  var currentUserInfo;
  return (
    (null === (currentUserInfo = this.userInfo) || void 0 === currentUserInfo
      ? void 0
      : currentUserInfo.display_name) || ""
  );
};
```

RULE FOR A CHILD SITE — A fixed 1rem bar with a centred 19.2rem wrapper; nav entries as router pushes with an active state derived from the route name; the more-menu rendered in the DOM and revealed on hover; a music toggle that persists its state; share and account as SDK-driven overlays.

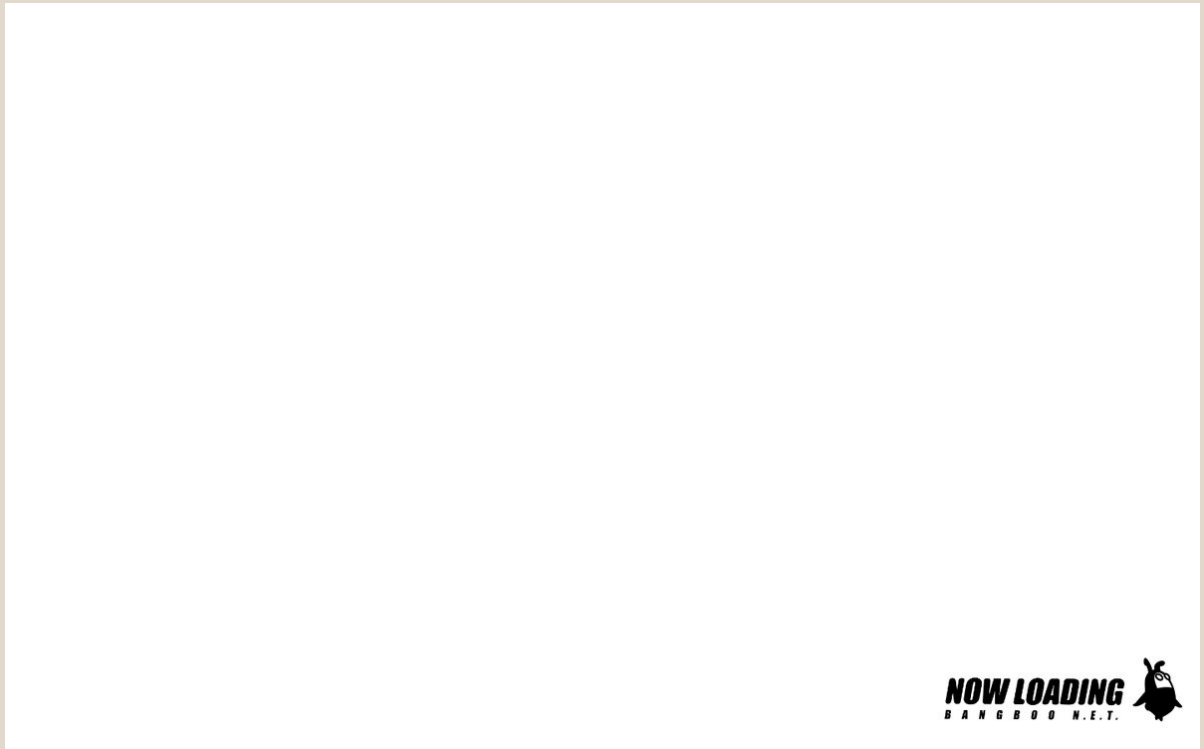

First-load screen: the shell loader and the Vue loader

Chapter 10 · 1 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — Two loaders cover the first paint. The shell ships `.zzz-loading` inline (position:fixed, full viewport, white, z-index 997) with `.zzz-loading__anim` at the bottom right (298 × 84 px sprite from fastcdn.hoyoverse.com) — it exists before any JavaScript runs. When Vue mounts, the loading component (module 250, scoped styles in module 668) takes over: `.loading` with `.loading__field` and `.loading__anim` running the `loadingLoop` keyframes (0.5 s, infinite) until the page component clears `store.isLoading`.

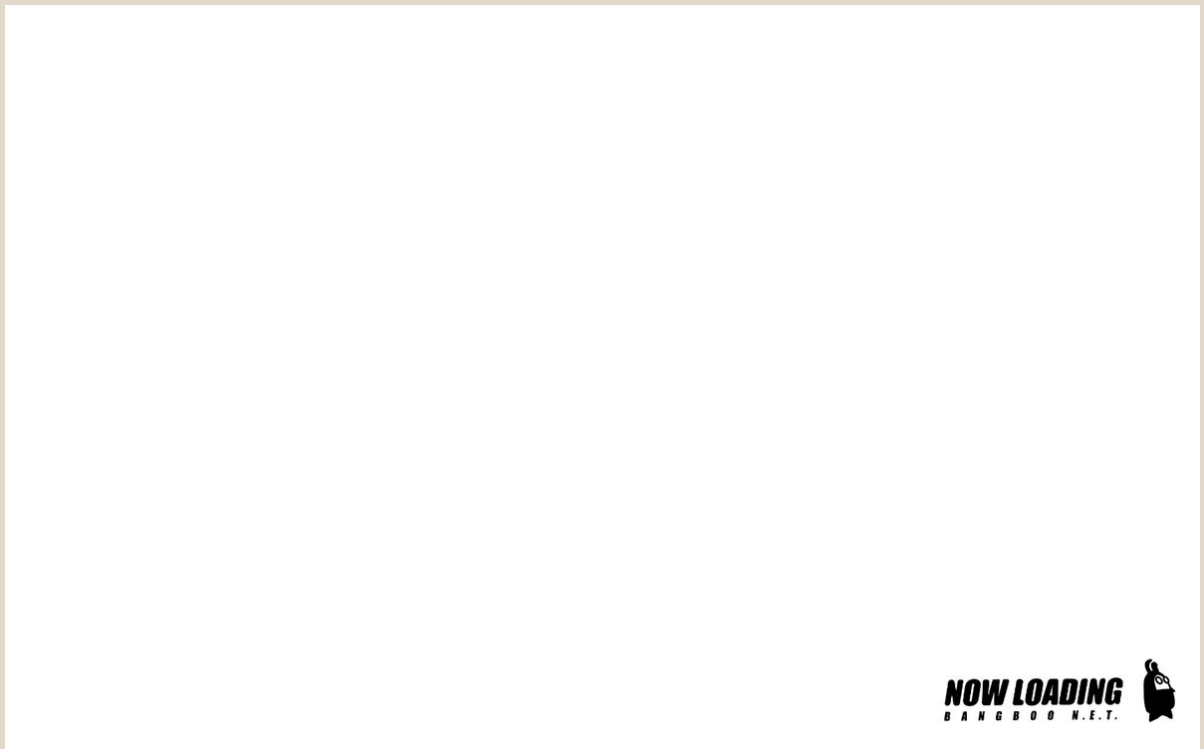

Time from navigation	Shell loader	Vue loader	App root mounted	Frame
2118 ms	—	—	no	loader-00.png
2417 ms	visible	—	no	loader-01.png
5096 ms	—	visible (loadingLoop-4ed1ddcf)	yes	loader-02.png
7154 ms	—	—	yes	loader-03.png
7154 ms	—	—	yes	done

First-load screen: the shell loader and the Vue loader - continued

MEASURED — Loader durations on the captured pages: /m/zh-cn/character 5117 ms, /m/zh-cn/company/privacy 3655 ms, /m/zh-cn/company/terms 3627 ms, /m/zh-cn/main 7573 ms, /m/zh-cn/news 5156 ms, /m/zh-cn/news/166535 5659 ms, /m/zh-cn/video 6068 ms, /m/zh-cn/world 5683 ms, /m/zh-cn/world/102370 5318 ms, redemption 61527 ms, /zh-cn/character 6992 ms, /zh-cn/company/privacy 3715 ms.

```
.loading[data-v-4ed1ddcf]{position:fixed;top:0;left:0;width:100%;height:100%;background-color:#fff;z-index:997}.loading__anim[data-v-4ed1ddcf]{position:absolute;right:16.875px;bottom:28.125px;width:298.125px;height:84.375px;background:url("https://fastcdn.hoyoverse.com/static-resource-v2/2024/05/17/ce1888e31d79d6d4b2f4ad9b25fbbd68_1850626400856033913.png");background-size:100% 3000%;background-position:0 0;animation:loadingLoop-4ed1ddcf .5s steps(30) infinite forwards}@media(max-width: 374px){.loading__anim[data-v-4ed1ddcf]{width:265px;height:75px;right:15px;bottom:25px}}@media(max-width: 300px){.loading__anim[data-v-4ed1ddcf]{width:198px;height:56px;right:11.2px;bottom:18.6px}}@keyframes loadingLoop-4ed1ddcf{0%{background-position:0 0}100%{background-position:0 -3000%}}.loading__field[data-v-4ed1ddcf]{width:0;height:0;overflow:hidden;visibility:hidden}.loading__progress[data-v-4ed1ddcf]{width:35vh;height:35vh;position:absolute;left:50%;top:50%;transform:translate(-50%, -50%)}div[data-v-4ed1ddcf]{position:absolute;width:2px;height:1vh;left:50%;top:0;margin-left
```

First-load screen: the shell loader and the Vue loader - continued

RULE FOR A CHILD SITE — Ship a static loader in the HTML so the viewport is never blank, then hand over to a component loader bound to a store flag that each page clears when its data has arrived.

Home hero (home-kv): key visual, play button, download panel

Chapter 11 · 1 observed · 1 measured · 0 inferred · 1 rules

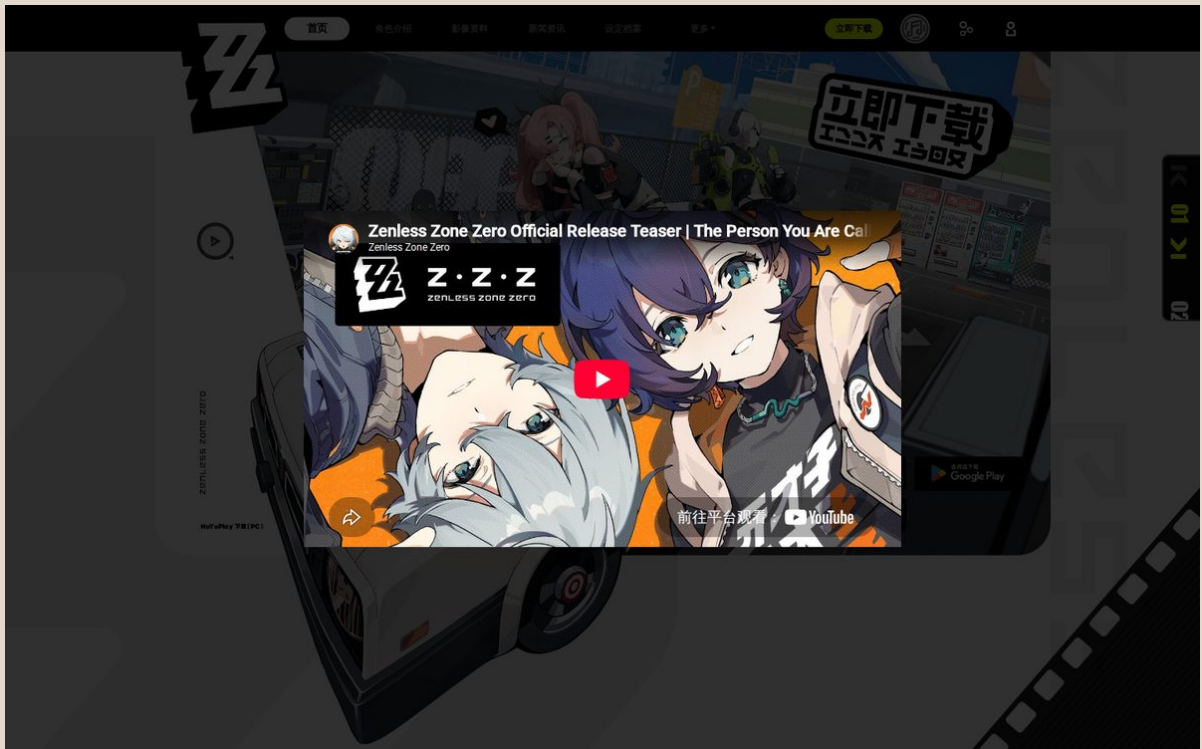

OBSERVED — The first section (section-index) is the key visual: home-kv_bg (the KV image from CMS channel 285), home-kv_slogan, home-kv_play (a 45 × 45 px play button that opens the video dialog with the PV) and home-kv_download, the download block that the HoYoverse download SDK (window.MeSeaDownload.DownloadCore, type "fab") fills with the platform buttons (sea-download-layout: PS5, Xbox, App Store, Google Play, HoYoPlay, Epic, Steam). The sidebar pager and the section number live in the same section.

MEASURED — Hovering the download block scales it: transform matrix(1.1, 0, 0, 1.1, 0, 0) (transition all); the SDK layout below it shows 7 platform items. Clicking the play button opens video-container pc 720 × 405 px centred and sets body overflow hidden; in headless Chromium no <video> element was created inside it (the player is injected by the video SDK after its own checks), so the PV source is documented from the CMS record instead.

download block hovered: the SDK platform layout

Home hero (home-kv): key visual, play button, download panel - c...

video dialog after clicking the play button

Specimen — home-kv (hero composition)

Home hero (home-kv): key visual, play button, download panel - c...

The slogan and background are CMS images; the download block is filled by the download SDK at run time.

Markup (verbatim from the live page; animation inline styles removed):

```
<div class="home-kv">
  <div class="home-kv-wrap">
    <div class="home-kv__bg">
      
      <p class="pc_download_tip">HoYoPlay 下载 (PC) </p>
    </div>
    <div class="home-kv-aside">
      <div class="home-kv__play">
      </div>
      <div class="home-kv__slogan">
        
      </div>
    </div>
  </div>
</div>
```

Home hero (home-kv): key visual, play button, download panel - c...

RULE FOR A CHILD SITE — A full-height first section with the KV as a positioned image, a play affordance that opens an overlay player, and a download block whose platform buttons come from configuration, not markup.

Sidebar pager: six section numbers, prev/next, scroll-driven active...

Chapter 12 · 1 observed · 2 measured · 0 inferred · 1 rules

OBSERVED — The sidebar (module 1418 inline component sidebar, styles module 1346) is fixed at the right edge: a `.sidebar__nav` with prev/next arrows and a vertical list of six numbers `.sidebar__pagers-num` (01–06), written vertically (writing-mode vertical-rl). It reads `store.homeSection` to mark the active number (#d8fa00) and calls `goTo(index)` on click; a scroll listener calls `getActiveSectionIndex(scrollY)` and commits `setHomeSection`, so the numbers follow the scroll.

Clicked number	scrollY after	store.homeSection	Active index	Section tops after (px)
03	1598	video	3	-1571, -717, 0, 667, 1354, 1953
05	2952	world	5	-2925, -2071, -1354, -687, 0, 599
01	0	main	1	27, 908, 1598, 2265, 2952, 3551

scrollTo(y)	store.homeSection	Active number
0	main	01
600	character	02
1200	video	03
1900	news	04
2500	world	05
3200	feature	06
3900	feature	06
4600	feature	06

MEASURED — Clicking the next arrow from the top scrolled to $y = 908$ (section 02) and the prev arrow carries the class `sidebar__nav-prev` at the top (disabled state). The `backTop` button scrolled the page to $y = 0$.

MEASURED — Sidebar box at 1440×900 : width 46.125px, height 201.375px, top 180px, right —, z-index 99; active number color rgb(216, 250, 0), font-size 27px.

```

```

RULE FOR A CHILD SITE — Section pagination = a fixed list of numbers bound to a store value that both the click handler and the scroll listener write; compute the active section from the section offsets on every scroll event.

Home character section: faction nav swiper + fade list swiper

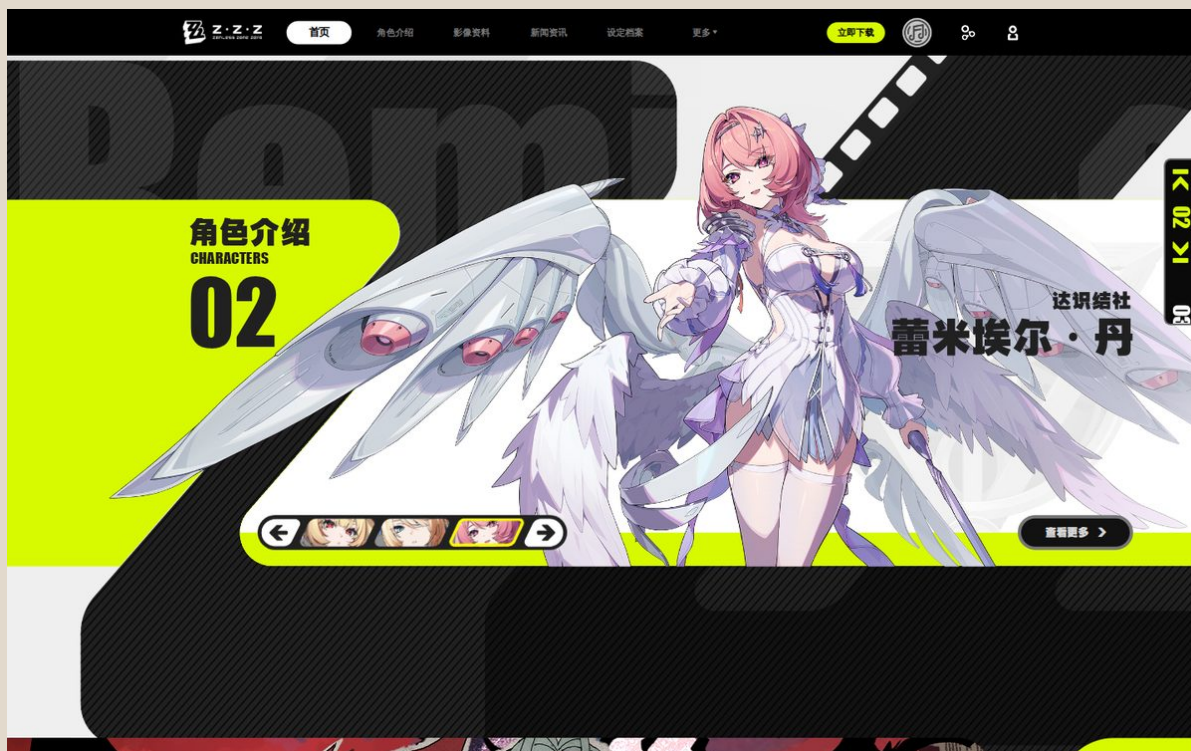

Chapter 13 · 1 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — Two Swiper instances are linked: home-character__nav (62 slides, effect slide, slidesPerView auto, loop false, speed 300 ms, no autoplay) shows the 62 character avatars as a horizontal strip with masks (home-character__nav-mask) and arrows; home-character__list (62 slides, effect fade, slidesPerView 1, loop false, speed 300 ms, no autoplay) shows one character at a time with a fade. Clicking a nav item (handleCharaNavClick) slides the list to that index; the arrows call handleNext/handlePrev. The data is the character list of CMS channel 287 (200 per page) grouped by the camps of channel 286 (store.characterCamps). 查看更多 (handleMoreClick) goes to /zh-cn/character.

MEASURED — Clicking nav item 6: list swiper activeIndex 5, translate -6610 px, the visible name changed from "都市秩序部 赛维里安·洛威尔" to "达识结社 蕾米埃尔·丹"; the next arrow then moved it to index 5. 查看更多 navigated to /zh-cn/character?id=164866.

Code — readable/sidebar.1418.js lines 1152–1171 (readable reconstruction of the shipped module; values and control flow unchanged):

```
handleCharaNavClick: function (navIndex, navChara) {
  (this.toggleRole(navIndex), this.$trackButton("character_icon", "").concat(navChara.iInfoId)));
},
handlePrev: function () {
  var prevTargetIndex = this.$refs.pageSwiper.swiper.activeIndex - 3;
  ((this.canSlidePrev = prevTargetIndex - 3 >= 0),
  (this.canSlideNext = prevTargetIndex + 3 <= this.charaList.length - 1),
  this.$refs.pageSwiper.swiper.slideTo(prevTargetIndex),
  this.$trackButton("next_character", ""));
},
handleNext: function () {
  var nextTargetIndex = this.$refs.pageSwiper.swiper.activeIndex + 3;
  ((this.canSlidePrev = nextTargetIndex - 3 >= 0),
  (this.canSlideNext = nextTargetIndex + 3 <= this.charaList.length - 1),
  this.$refs.pageSwiper.swiper.slideTo(nextTargetIndex),
  this.$trackButton("next_character", ""));
},
handleMoreClick: function () {
  (this.$trackButton("character_more", ""),
  this.$router.push({
```

RULE FOR A CHILD SITE — Pair a thumbnail strip (slidesPerView auto) with a fade carousel; keep both on the same index; derive camp labels from a separate list and the "more" button as a router push.

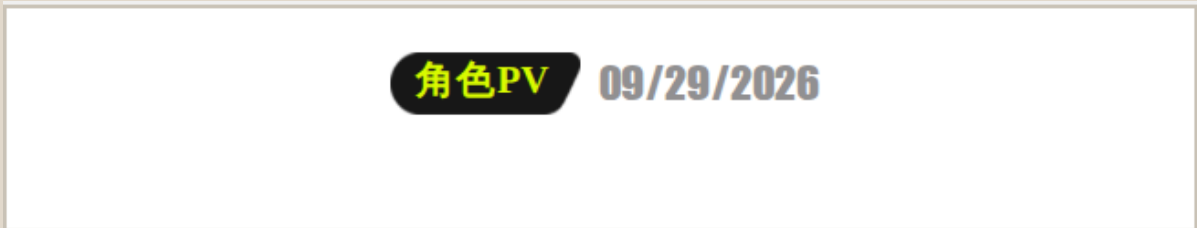

Home video section: fade carousel, thumbnail nav, overlay player

Chapter 14 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — home-video__main (9 slides, effect fade, slidesPerView 1, loop false, speed 300 ms, no autoplay) shows the cover of the current video (home-video__cover) with a play icon (home-video__action-icon) and a summary (category, date, title in home-video__summary); home-video__nav lists the nine latest records of channel 1332 as thumbnails (home-video__nav-item, is-active on the current one). handleVideoNavClick slides the main swiper; openPlayer/getVideoDialogInfo open the video-dialog component (module 1157) with the record's video URL; 查看更多 links to /zh-cn/video.

MEASURED — Clicking the fourth thumbnail: main swiper activeIndex 3 (translate -3555 px), summary "角色PV 09/29/2026 《绝区零》洛克茜角色PV | 发条骑士" "角色展示 09/04/2026 《绝区零》克拉蕾角色展示 | 不想培训，但攻略已写好", active nav 4. The play icon click did not create a <video> in headless Chromium (no dialog element reported).

Specimen — home-video summary block

Category, date and title of the active video.

Markup (verbatim from the live page; animation inline styles removed):

```
<div data-v-95fb0980="" class="home-video__summary">
  <div data-v-95fb0980="" class="home-video__summary-item">
    <span data-v-95fb0980="" class="home-video__summary-category">
      角色PV
    </span>
    <span data-v-95fb0980="" class="home-video__summary-date">09/29/2026</span>
  </div>
  <div data-v-95fb0980="" class="home-video__summary-title">
    《绝区零》洛克茜角色PV | 发条骑士
  </div>
</div>
```

Specimen — home-video nav thumbnail

Home video section: fade carousel, thumbnail nav, overlay player...

One thumbnail of the nav row; is-active marks the current one.

Markup (verbatim from the live page; animation inline styles removed):

```
<div data-v-95fb0980="" class="home-video__nav-item is-active">
  
  <div data-v-95fb0980="" class="home-video__nav-mask">
</div>

Home news section: looping banner carousel with bullets and a sc...

Chapter 15 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — home-news__banner-list (18 slides, effect slide, slidesPerView auto, loop true, speed 300 ms, no autoplay) carries the six latest news records (channel 288, iPageSize 7) as linked banners (home-news__banner-img /zh-cn/news/<iInfoId>); Swiper's loop mode triples them to 18 slides. Six pagination bullets (.swiper-pagination-bullet with swiper-pagination-index-n) jump to a slide; the date and title of the active record are shown beside it, and the summary strip home-news__summary-scroll runs the wordsLoop keyframes (20 s, linear, infinite).

MEASURED — At rest the banner swiper reported activeIndex 6 (realIndex 0, 18 slides); clicking bullet 3 moved it to realIndex 2 and the title became "她与她的隐秘往事 | 3.2版本内容一览 (下期)". Links in the section: /zh-cn/news/166535, /zh-cn/news/166498, /zh-cn/news/166497, /zh-cn/news/166496, /zh-cn/news/166476, /zh-cn/news/166475.

Specimen — home-news banner (one slide)

Home news section: looping banner carousel with bullets and a sc...

A linked banner slide of the loop swiper.

Markup (verbatim from the live page; animation inline styles removed):

Home world section: looping banner swiper with prev/next

Chapter 16 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — `home-world__banner-list` (9 slides, effect slide, `slidesPerView` auto, loop true, speed 300 ms, no autoplay) shows the three world entries of channel 290 (looped to nine), each a link to `/zh-cn/world`; prev/next arrows are Swiper's `.swiper-button-prev/next` styled by the section.

MEASURED — Next arrow: `activeIndex` 3 4 (`realIndex` 1); links in the section: `/zh-cn/world`, `https://hoyo.link/5zqkrITAd`.

Specimen — home-world banner (one slide)

Rendered by the site's own stylesheets at the 1440×900 scale.

Markup (verbatim from the live page; animation inline styles removed):

```

Home feature section: concept block, feature fade swiper, concept...

Chapter 17 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — The last section (section-feature) pairs home-feature__list (6 slides, effect fade, slidesPerView 1, loop true, speed 300 ms, no autoplay) with a concept block: section__concept-title (Drip Fest 2025), section__concept-icon, and section__concept-video (a TV-shaped frame with a play button that opens the concept video; conceptUrl in the page component). The feature list comes from the home API getFeature.

MEASURED — Feature next arrow: activeIndex 1 2; the concept play click did not create a player element in headless Chromium.

feature section after the concept play click

Specimen — section concept title

Footer: back-to-top, social bar, subscription widget, HoYoverse foo...

Chapter 18 · 1 observed · 2 measured · 0 inferred · 1 rules

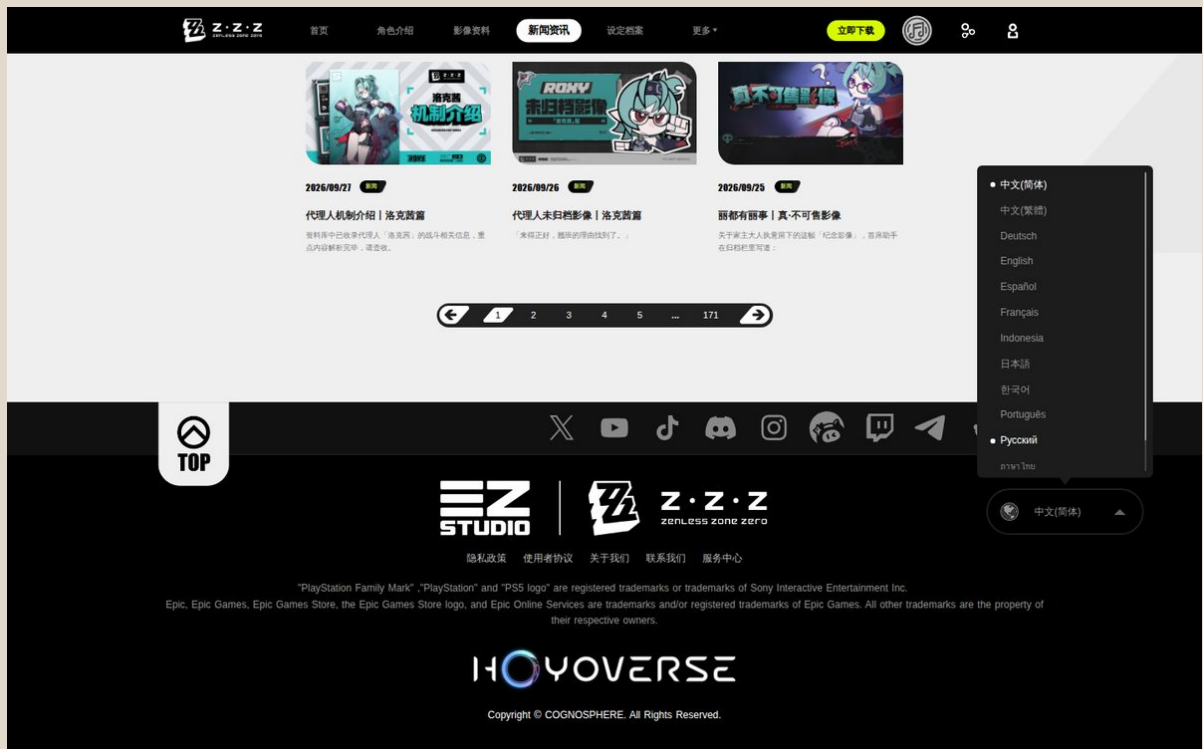

OBSERVED — The footer is three stacked parts: footer__wrap with the backTop button (module 347; class light on light sections) and footer__socialbar, which the footer SDK fills with the me-media-icon row (Twitter, YouTube, TikTok, Discord, Instagram, HoYoLAB, Twitch, Telegram, Reddit) plus a copy-link button (me-hover-btn with two stacked images, normal and hover); footer-crm with the hyv-crm subscription form (e-mail subscription widget of the CRM SDK); and the HoYoverse footer (hy-footer, hashed CSS-module classes such as link-1VLT00 and locale-selector-3HQCGC) with the product logo, the legal links (隐私政策, 使用者协议, 关于我们, 联系我们, 客服中心), the trademark notice and the language selector.

Footer link	Target

Specimen — subscription widget (footer-crm, CRM SDK)

Injected by the CRM SDK, which also injects its stylesheet on every page. In every capture its inline state is `display: none` (the SDK shows it once its subscription API has answered), so the rendered widget is the live one at the bottom of this page.

Markup (verbatim from the live page; animation inline styles removed):

```
<div data-v-2b67f5b0="" class="footer-crm" style="display: none">
  <div data-v-2b67f5b0="" class="hyv-crm">
    <div class="hyv-crm-flat">
      <div class="hyv-form-container">
        <form class="hyv-form">
          <div class="hyv-crm-flat__pc">
            <div class="hyv-crm-flat-left">
              <div class="hyv-subscription-title">订阅消息</div>
              <div class="hyv-subscription-desc">订阅Type II独家推送，可以获得活动通知、最新PV、版本壁纸、表情包等不定期推送

RULE FOR A CHILD SITE — Keep the three-part footer: a site-owned social/back-top strip, an SDK-owned subscription block and an SDK-owned corporate footer with the language picker; a child site owns only the first part and the containers.

Character page (/zh-cn/character): fade stage, pagination, voice pl...

Chapter 19 · 1 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — Route lang-character (module 1439, readable source; styles module 1330 plus the character-block styles of 1250). The page reads the character list (channel 287, iPageSize 200) and the camp list (channel 286) and keeps the current character in the query (?id=<iInfoId>; the capture landed on ?id=166076). Three Swiper instances: cha-swiper (62 slides, effect fade, slidesPerView 1, loop false, direction horizontal, speed 300 ms) shows one character with its art (character-cover), name (character-info-name, English name in Mont-Heavy), CV line (character-info-prop), quote and description (character-info-desc) and the voice player (character-voice-player with character-voice-btn and the language switcher character-voice-lang-switcher); cha-pagination-swiper (2 slides, effect slide, slidesPerView 3, loop false, direction horizontal, speed 300 ms) is the arrow/pagination row; side-camp-swiper (60 slides, effect slide, slidesPerView auto, loop true, direction vertical, speed 300 ms) is the vertical faction rail on the right (side-camp-item with icon and name), expanded by 更多阵营 (side-camp-expand-btn).

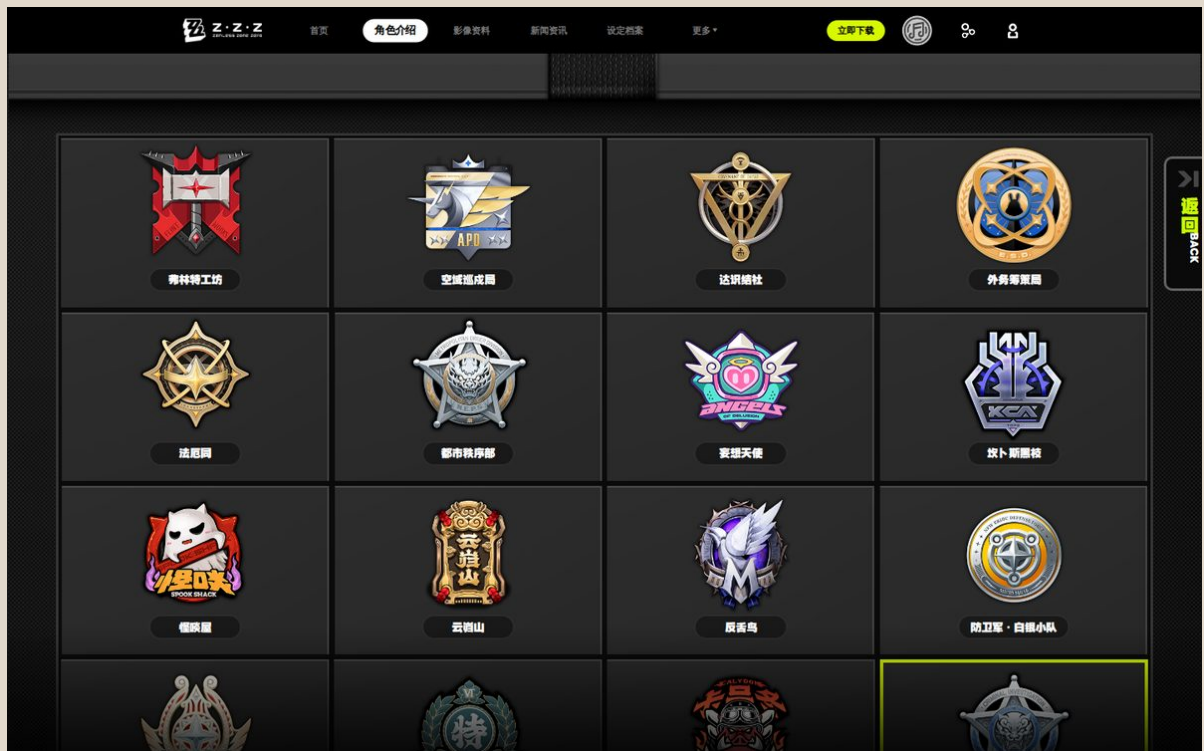

MEASURED — At 1440 × 900 the page body is 1210 px high; the active character was "赛维里安·洛威尔 Severian Lowell"; the faction rail listed 20 factions: 弗林特工坊, 空域巡戍局, 达识结社, 外务筹策局, 法厄同, 都市秩序部, 妄想天使, 坎卜斯黑枝, 怪啖屋, 云岚山, 反舌鸟, 防卫军·白银小队...; the page background is linear-gradient(rgb(232, 232, 232), rgb(232, 232, 232) 545.062px, rgb(239, 239, 239) 545.062px, rgb(239, 239, 239) 100%). Clicking a pagination item, the voice button, a faction and pressing ArrowRight in headless Chromium did not move the fade swiper (activeIndex stayed 0; the voice button toggled its --progress custom property between 99.4337% 44.3312% (19–1431 ms, 6001 frames)), which points at handlers bound to touch/pointer gestures on the swiper rather than plain clicks; the expand button exposed all 60 faction items.

RULE FOR A CHILD SITE — One record per slide with a fade transition; the thumbnail row and the faction rail are separate swipers synchronised through the component state; keep the active record in the URL query so a character page is linkable.

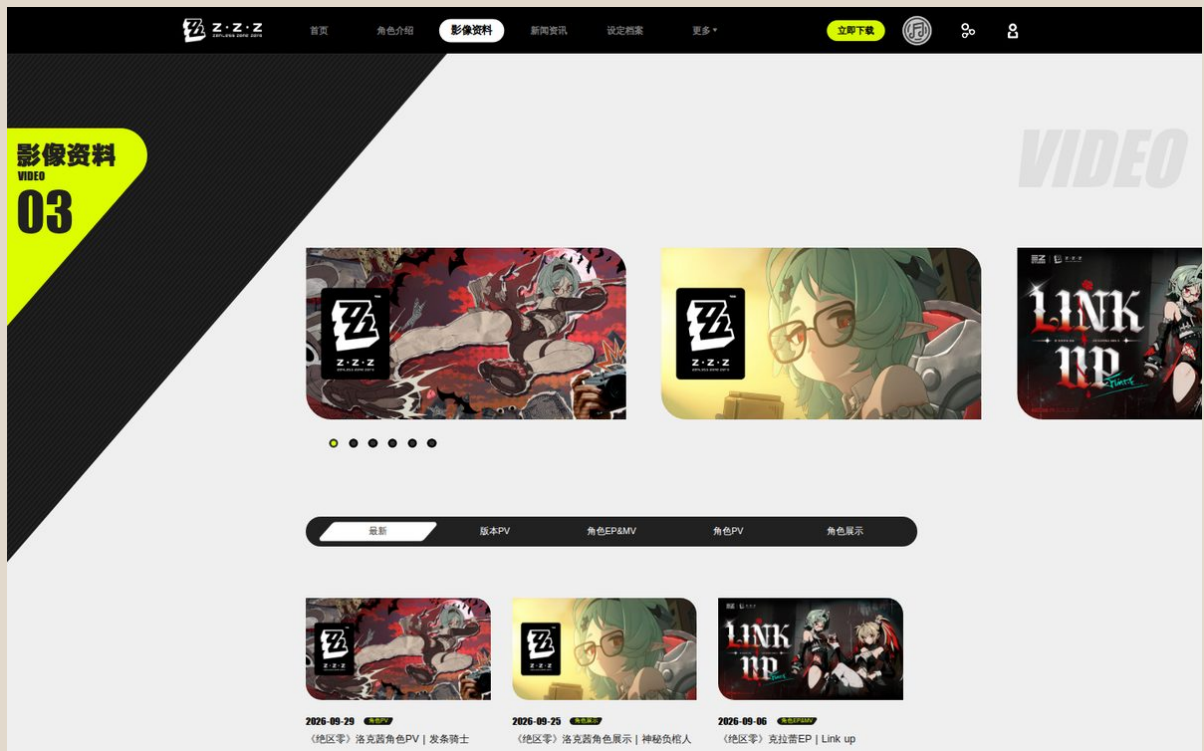

Video page (/zh-cn/video): latest slider, category tabs, paged grid,...

Chapter 20 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — Route lang-video (module 1420, readable source; styles 1403, video-tag 1400, pager 1170). The page shows video-slider__latest (18 slides, effect slide, slidesPerView auto, loop true, direction horizontal, speed 300 ms) with six bullets, the tab row video-tab (最新 and the sub-channels of 1332 from getChildTree: 版本PV 1341, 角色EP&MV 1340, 角色PV 1339, 角色展示 1338; the tab is the ?category query), the grid video-list (nine video-list__item per page: banner, date in font-num, tag, title) and the pager mi-ho-yo-pager-rich (module 1174). Clicking an item opens the video-dialog with the record's video.

MEASURED — Tabs: 最新 /zh-cn/video; 版本PV /zh-cn/video?category=1341; 角色EP&MV /zh-cn/video?category=1340; 角色PV /zh-cn/video?category=1339; 角色展示 /zh-cn/video?category=1338. Clicking 版本PV changed the route to /zh-cn/video?category=1341 and requested ../getContentList?iPageSize=9&iPage=1&iChanId=1341&sLangKey=zh-cn, the grid went from "《绝区零》洛克茜角色PV | 发条骑士" to "《绝区零》3.2版本PV | 她与她的隐秘往事" (7 items). Pager buttons: 1 2 3 4 5.

```

News index (/zh-cn/news): latest slider, tabs, paged list

Chapter 21 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — Route lang-news (module 1416, readable source; styles 1396, news-tag 1160, pager 1170, section-nav 1135). Same skeleton as the video page: news-slider__latest (18 slides, effect slide, slidesPerView auto, loop true, direction horizontal, speed 300 ms), the tab row news-tab (最新 288, 新闻 295, 公告 296, 活动 297 — the ?category query), the list news-list of nine news-list__item (banner, date, news-tag, title, description) and the pager. The data is channel 288 with iPageSize 9; the tabs call the sub-channel with the same page size.

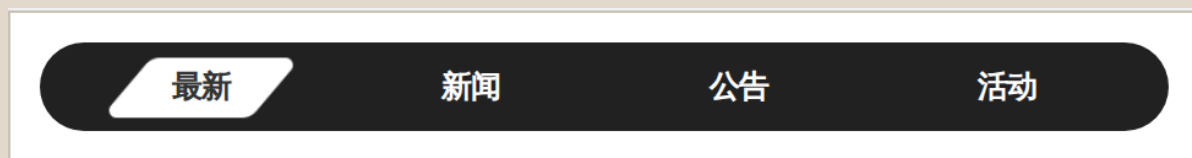

MEASURED — Tabs: 最新 /zh-cn/news; 新闻 /zh-cn/news?category=295; 公告 /zh-cn/news?category=296; 活动 /zh-cn/news?category=297. Clicking 公告: route /zh-cn/news?category=296, request .../getContentList?iPageSize=9&iPage=1&iChanId=296&sLangKey=zh-cn, first titles 「跛脚乌鸦奇探录」活动说明 / 「锵锵！球仔成长日记」活动说明 / 3.2版本限时频段（下期）. The next-page arrow requested .../getContentList?iPageSize=9&iPage=2&iChanId=296&sLangKey=zh-cn and the pager showed page 2. Clicking a banner navigated to /zh-cn/news/165997 (router push, requests .../getContent?iChanId=288&iAround=1&iInfoId=165997&sLangKey=zh-cn); the back button returned to /zh-cn/news. Pager at rest: 1 2 3 4 5 171 (22359).

News article (/zh-cn/news/:id) — the template this page runs in

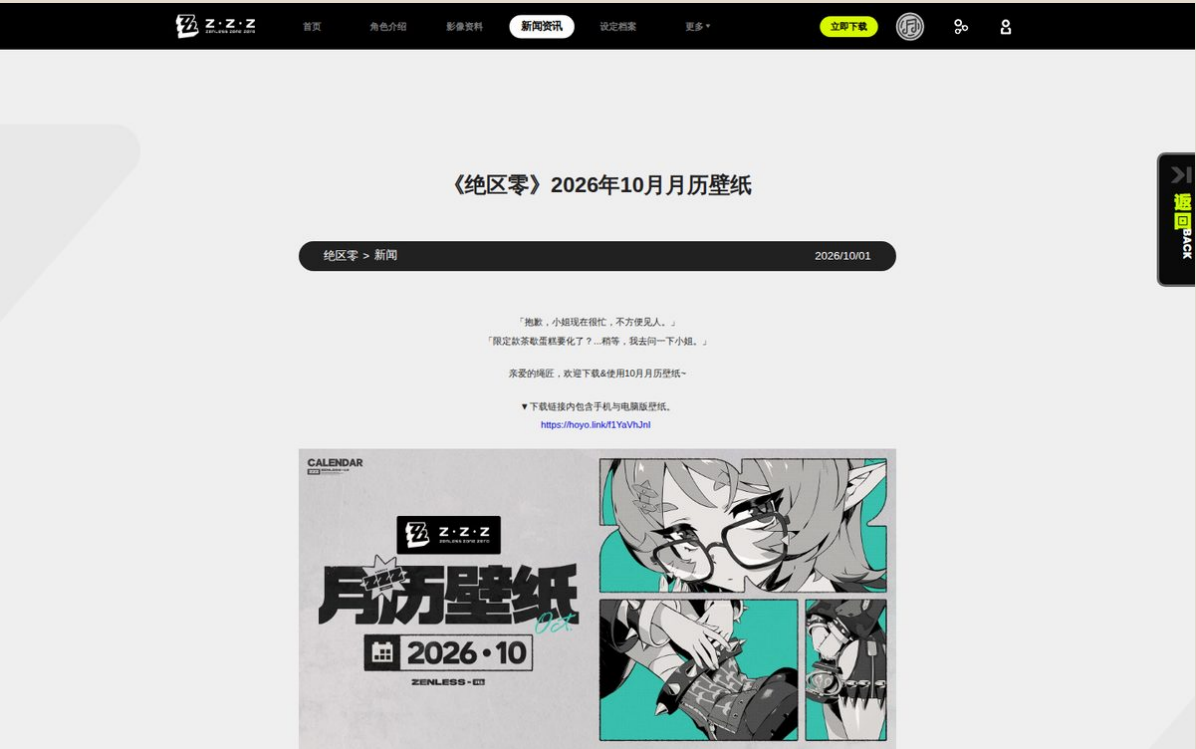

Chapter 22 · 2 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — Route lang-news-id (module 1451, [readable source](#); styles 1411). asyncData calls the news API getDetail({iInfoId, iChanId: 288, sLangKey}) /getContent?...&iAround=1; a failed call redirects to the news index. The template: news-detail-back (a back-btn with arrow and 返回 / BACK), news-detail-wrapper news-detail-container (12.8rem wide) news-detail-article with news-detail__title (sTitle), news-detail__info (the breadcrumb 绝区零 > 新闻, the category news-tag, the date dtStartTime) and news-detail__content, which receives sContent as raw HTML (v-html). A section__foot decoration and a sticky backContainer with the backTop button follow, then the footer.

OBSERVED — The CMS editor emits p/span/strong/em/u/br/img/h4/a/table/td with inline white-space, text-align, line-height, font-size and min-height styles; the template styles img and video to max-width 100%, tables to full width with #c2c2c2 borders and a .table-wrapper scroll box, links to break-word. This handbook uses exactly that vocabulary.

MEASURED — Article page at 1440 × 900: title font-size 25.875px, font-weight 800, color rgb(34, 33, 34), line-height 33.6375px; info bar height 36px, background-color rgb(34, 33, 34), border-radius 18px, font-size 13.5px; content font-size 11.25px, line-height 16.875px, color rgb(34, 33, 34); container width 720px, padding-top —; page height 1630 px.

```

Code — readable/lang-news.1451.js lines 5–34 (readable reconstruction of the shipped module; values and control flow unchanged):

```
* Nuxt page component for the desktop news-article route `lang-news-id` (`scrollToTop`). `valid
ate` only accepts numeric `params.id`; `asyncData` loads the article via the news API (module
1124) `getDetail` with `iInfoId: params.id`, `iChanId: CHANNEL_ID_CONFIG.NEWS.ALL` (app bundle
, module 28) and `sLangKey: store.state.lang`, redirecting to `lang-news` on error, and expose
s it as `newsContent`; `head()` uses its title plus i18n `seoTitlePrefix`. It renders `news-de
tail` with a `nuxt-link` back button to `lang-news` (`news-detail-back back-btn`, `backArrow`/
`backText` i18n `textBack`/`backSubtext`) that tracks `news_back` with the article id via `$tr
ackButton`, then the `news-detail__title`, a `news-detail__info` breadcrumb (i18n `gameName` >
```

News article (/zh-cn/news/:id) — the template this page runs in - c...

```
`news-tag` for `sChanId[0]`) with `dateFormat`, the HTML `sContent` in `news-detail__content`
, and a `backTop` (module 347, theme `reverse`) in `backContainer`.
*
* Exports (minified key → meaning):
*   default → the `lang-news-id` desktop news-detail page Vue component (compiled with vue-load
er normalizer)
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
nd
* control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
.
*/
// module 1451 from 0d508be.js

RULE FOR A CHILD SITE — Render CMS HTML into a bounded reading column with only the element-level rules the editor needs (images, tables, links); keep the back control and the date/category bar as template parts, not content.

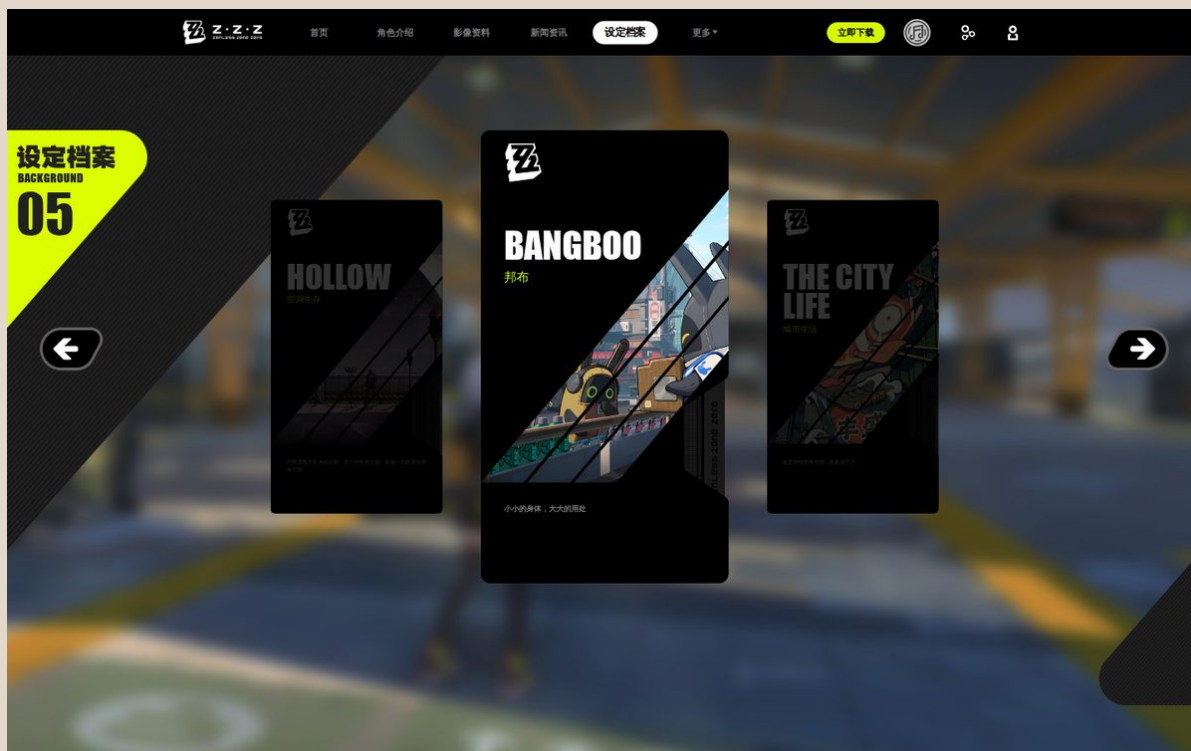

World page (/zh-cn/world) and world entries (/zh-cn/world/:id)

Chapter 23 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — Route lang-world (module 1441, readable source; styles 1406 with the slideToTop keyframes). The page is one Swiper (world__swiper: 9 slides, effect slide, slidesPerView auto, loop true, direction horizontal, speed 800 ms) of the three channel-290 entries looped to nine slides (world__slide world__slide-container with a mask, a cover (cover-name with name-en and name, cover-summary) and a tape (world__slide-tape with tape-name)); prev/next arrows at the window edges; clicking the active slide (gotoDetail) pushes /zh-cn/world/<iInfoId>. The slides enter with slideToTop (0.3 s, forwards) and carry isInitAnim.

MEASURED — Slides: Bangboo, The city life, Hollow (×3 for the loop). Next: activeIndex 3 4 over 828 ms (transition-duration 800ms, the slides translate by ±40.432rem and scale). Hovering the active slide: cover {"class": "world__slide-cover", "opacity": "1", "transform": "matrix(1, 0, 0, 1, -101.745, 0)"}, tape {"class": "world__slide-tape", "opacity": "1", "transform": "matrix(1, 0, 0, 1, 100.789, 0)"}. Clicking it navigated to /zh-cn/world with ; the detail page (route lang-world-id, module 1452, styles 1413) renders world-detail-container with .

ty:1}}
```

Code — readable/world.1441.js lines 5–20 (readable reconstruction of the shipped module; values and control flow unchanged):

```
* Nuxt page component `world` for the desktop world-archive route `lang-world`. `asyncData` loa
ds entries via the world API (module 1152) `getWorldList` (channel `CHANNEL_ID_CONFIG.WORLD`)
with `sLangKey: store.state.lang`, redirects to `lang-main` when the list is empty, and return
s `worldList` plus the `activeIndex` matching `params.worldId`; `mounted` runs `initSwiper` (r
e-mounts the swiper at `initialSlide = activeIndex` and starts `isInitAnim`). It renders the d
esktop `pageTab` (nav-num 5) and a client-only looped vue-awesome-swiper coverflow (ref `world
Swiper`, no touch move, speed 800) whose `progress` handler applies `translateX(...rem) scale(
...)/opacity per slide`, `transitionStart` re-stacks z-indexes when `dir` is `next`, `slideCha
nge` stores `activeIndex`, and `click` on the active slide calls `gotoDetail`; each `world_sl
ide` shows a cover with `name-en`/`name` (`data-lang`, hidden when `isEN`), `cover-summary` an
d `world_slide-tape`, plus `world_navigation` prev/next buttons that set `dir` and track `fi
le_next`. `gotoDetail` plays the `isClickAnim` animation, waits via `asyncTimeout`, routes to
`lang-world-id` and tracks `file_card` via `$trackButton`; `head()` uses `i18n `nav5` + `seoTit
lePrefix`.
*
* Exports (minified key → meaning):
*   default → the `world` desktop world-archive carousel page Vue component (route lang-world,
  compiled with vue-loader normalizer)
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
nd
* control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
.

Company documents (/zh-cn/company/privacy, /terms): the protoc...

Chapter 24 · 1 observed · 0 measured · 0 inferred · 0 rules

OBSERVED — Routes lang-company-privacy / -terms (modules 1446/1447, page component protocol 1142, styles web-protocol 1140 and protocol-pdf 1130). The page requests the single record of channel 294 (privacy) or 293 (terms) with isPreview=0 and renders it: when the record is HTML it goes into the web-protocol container (title, breadcrumb 绝区零 > 隐私政策, the document with its tables in .table-wrapper); when it is a PDF the HoYoverse pdf viewer (pdf.js, modules 1131 and the vendor bundle) renders it into protocol-pdf. The captured privacy page is 15785 px high, the terms page 23219 px.

privacy policy at 1440 × 900

No settled markup for web-protocol-container in the capture of zh-cn_company_privacy.

  appBundle.CHANNEL_ID_CONFIG.PROTOCOL (PRIVACY, TERMS, TERMS2, TERMS3, HISTORY, JP_FUND) and ca
  lls the user-model get (module 1117) on appBundle.apiBase + "/getContentList" (getPrivacy, get
  User, getTerms2, getTerms3, getKrHistory) or "/getContent" with iInfoId from INFO_ID_CONFIG.FU
  ND/ABOUT (getJpFund, getJpAbout), resolving the first item. formatProtocol parses each item's
  sExt JSON string and copies sExt.link_pdf to pdfUrl.
*
* Exports (minified key → meaning):
*   a → protocol CMS API object { formatProtocol, getPrivacy, getUser, getTerms2, getTerms3, ge
  tKrHistory, getJpFund, getJpAbout }
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
  nd
* control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
.

Redemption page (/redemption): a separate build on the same host

Chapter 25 · 1 observed · 1 measured · 1 inferred · 0 rules

OBSERVED — The 兑换码 entry of the more-menu opens /redemption. It is not a Nuxt route: the server answers with a different document that loads its own bundles from `act.hoyoverse.com/zzz/event/20240601-exchange-anchpz/` (vendors, styles, index) and a stylesheet, plus Vue 2.7.14 runtime, browser-tips, the account SDK and mihoyo-analysis from webstatic. The page is the code-redemption form (server, nickname, code, 确认兑换) with the redemption rules; it needs a HoYoverse login (the account SDK) to submit.

MEASURED — Captured document: 36 style tags, 100 class names, 1265 px high; scripts: `act.hoyoverse.com/common/event/libs/apm/sdk-sea.js?aid=1000089&globalName=apmPlus`, `act.hoyoverse.com/common/event/packages/apm-helper/index.js`, `act.hoyoverse.com/zzz/event/20240601-exchange-anchpz/vendors_93afb6fb0a5305e07d09.js`, `act.hoyoverse.com/zzz/event/20240601-exchange-anchpz/styles_b7dd487550e6f28f79d8.js`, `act.hoyoverse.com/zzz/event/20240601-exchange-anchpz/index_3c3e5df466bef727fede.js`, `webstatic.hoyoverse.com/dora/biz/hoyoverse-h5log/v2.1/main.js`, `webstatic.hoyoverse.com/dora/lib/vue/2.7.14/vue.runtime.min.js`, `webstatic.hoyoverse.com/dora/biz/browser-tips/v1/main.js`, `webstatic.hoyoverse.com/dora/biz/hoyoverse-account-sdk/main.js`, `webstatic.hoyoverse.com/dora/biz/mihoyo-analysis/v2/main.js`, `gs.hoyoverse.com/lib/web-cdkey-exchange/nap/main.js`, `webstatic.hoyoverse.com/dora/biz/hoyoverse-footer/v2/footer.js`, `webstatic.hoyoverse.com/dora/biz/me-design/sea-download/index.global.nap.js`.

兑换说明

- 1、在兑换前，请登录您的HoYoverse通行帐号。并确保您已在游戏中创建角色且和您登录的HoYoverse通行帐号绑定。否则您将无法进行兑换。
- 2、兑换成功后，您将通过游戏内邮件收到兑换的物品。请在游戏中检查以确保您已经收到了物品，并在邮件有效期内领取物品。
- 3、注意兑换码的兑换条件和有效期限。不满足兑换条件或兑换码过期后无法兑换。

redemption page at 1440 × 900

INFERRED — For a child site this page is an external form: link to it from the more-menu and let the account SDK handle identity; it does not share the site's build or stylesheets.

Phone tree: /m routes, the m-header and its menu, the rem adapt...

Chapter 26 · 1 observed · 1 measured · 0 inferred · 1 rules

OBSERVED — Phones get a parallel site: the shell head script tests navigator.userAgent for phone/pad/Android/iPhone (and MacIntel with touch points, i.e. iPadOS) and rewrites the path to /m/<lang>/...; the Nuxt router has an m-lang-* route for every desktop route (same page names with an m- prefix, separate chunks: 0eb4cff / fd57a96+df9cade+b5b7858+564bae5 / fd57a96+b5b7858+ded62d7 / fd57a96+b74c7e3+b5b7858+7ff8829+a9873dc / fd57a96+b74c7e3+b5b7858+f87ccae / fd57a96+b74c7e3+b5b7858+fcdddd8), and the mobile layout (module 551) mounts m-header-bar (module 349, styles 695) instead of header-bar. The rem adapter uses designWidth 750 (1rem = 52px at 390 wide), adds the class mo to <html>, and the mobile stylesheets are separate modules (m-home-*, m-cha, m-news, m-video, m-world, m-section-nav).

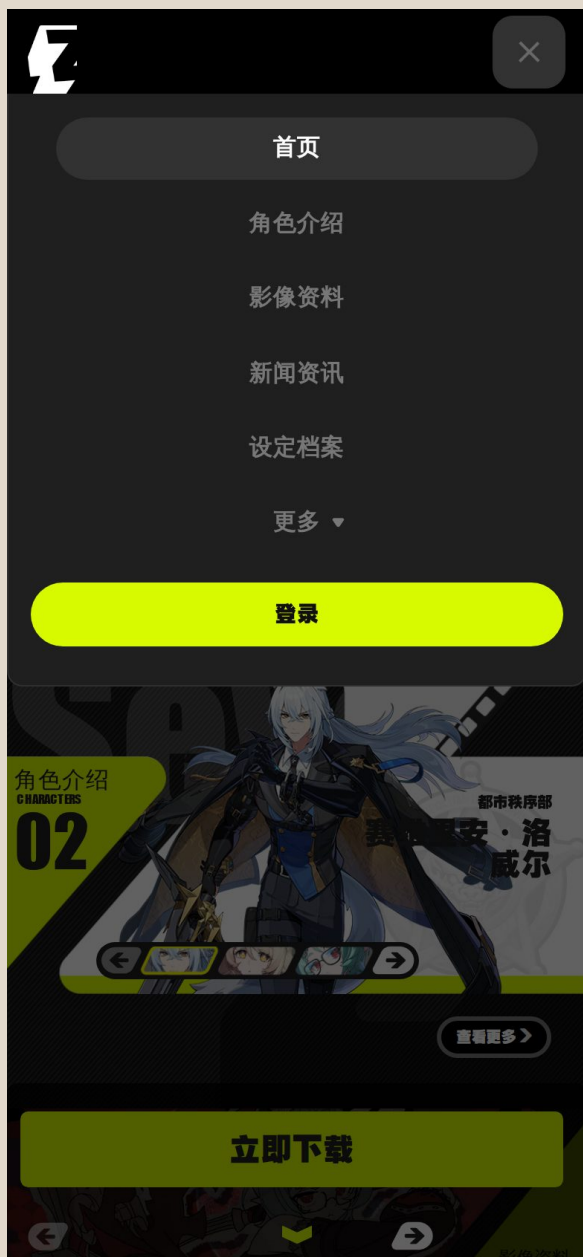

MEASURED — /m/zh-cn/main at 390 × 844: 2423 px high, 261 class names, 54 style tags; root font-size 52px. Header parts: m-header__logo, m-header__download, m-audio-player, m-header__menu-btn, m-header__menu, m-header__menu-header, m-header__menu-close, m-header__menu-content, m-header__menu-links, m-header__menu-link. Tapping the menu button (m-header__menu-btn) opened m-header__menu 390×844, m-header__menu-header 343×57, m-header__menu-close 50×50 with the entries ; body overflow hidden.

Phone tree: /m routes, the m-header and its menu, the rem adapt...

phone home at 390 × 844

Phone tree: /m routes, the m-header and its menu, the rem adapt...

phone menu open

Specimen — m-header (bar with logo, download, music and menu button)

Phone tree: /m routes, the m-header and its menu, the rem adapt...

The menu panel is a sibling in the DOM, shown by the menu button.

Code — readable/m-header-bar.349.js lines 5–24 (readable reconstruction of the shipped module; values and control flow unchanged):

```
* Vue component `m-header-bar`, the mobile site header. It extends the shared `base` mixin, reg
isters `headerSocial`, builds its nav list from `HoYoverseMil8n.e` plus i18n-driven extra link
s (exchange/top_up/community under a `menu_more_label` group and `menu_care_link`), and render
s `.m-header` with the logo (`.m-header__logo`, `.logo-icon`, `.logoSmall-img`), a download bu
tton (`.m-header__download` calling `$downloadIns.download()`), a `me-audio` BGM player (`.m-h
eader__bgm`, storageKey `napSeaBgAudio`), a slide-in menu panel (`.m-header__menu`, `.m-header
__menu-link`, `.nav-content-sub`) and login/user info blocks (`.header-user-info`, `.header-lo
gin-btn`). It reads `$store.state.lang`, `bgmMuted`, `homeSection`, commits `muteBgm`, navigat
es via `$router.push({ name: 'm-lang-<link>' })`, tracks clicks with `$trackEvent`/$trackButt
on`, uses lodash `_.omit`, `$clipboard`, `$mtoast`, `$mJump` and `$accountRoleUtil.show()`, an
d toggles `showMenuBtn`/`isStartScroll` from the window scroll position.
*
* Exports (minified key → meaning):
*   a → the m-header-bar Vue component (normalized component exports)
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
nd
* control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
.
*/
// module 349 from 8c4c131.js
// deps: 65, 297, 208, 171, 67, 119, 118, 262, 251, 49, 694, 36, 409, 410
const module_349 = function (webpackModule, webpackExports, webpackRequire) {
  "use strict";
```

Phone tree: /m routes, the m-header and its menu, the rem adapt...

```
(webpackRequire(65),  
  webpackRequire(297),

  webpackRequire(119),  
  webpackRequire(118));
```

RULE FOR A CHILD SITE — Serve phones a separate route tree with its own components and stylesheets chosen by user agent, not a responsive reflow; keep the same data, store and API.

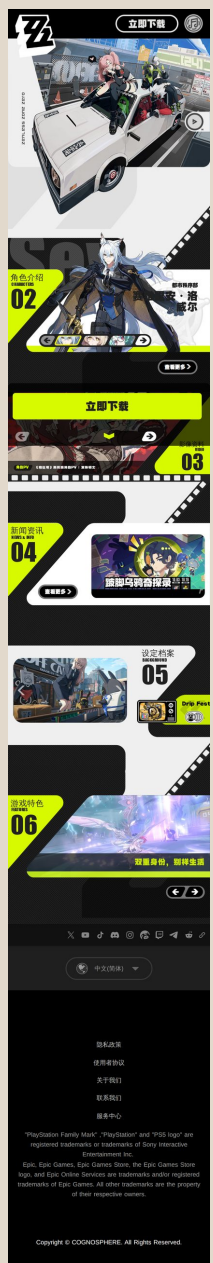

Phone home: KV, section nav, character, video, news, world, featu...

Chapter 27 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — Route m-lang-main (module 1419, readable source): sections m-home-kv (KV with slogan, play and a fixed-position download aside), the m-section-nav numbers, m-home-character (62 slides, effect slide, slidesPerView auto, loop false nav + 62 slides, effect fade, slidesPerView 1, loop false list), m-home-video (9 slides, effect slide, slidesPerView 1, loop false), m-home-news (18 slides, effect slide, slidesPerView auto, loop true), m-home-world (9 slides, effect slide, slidesPerView auto, loop true), m-home-feature (6 slides, effect fade, slidesPerView 1, loop true) and the m-preregister block (toLanding). The page tracks scroll (onScroll fixedPos) and resize (onResize) itself.

MEASURED — Section tops at 390 wide: index 57px (h 340), character 421px (h 297), video 740px (h 229), news 993px (h 229), world 1230px (h 229), feature 1459px (h 310). After scrolling to y = 900 the header class was m-header and the page's fixedPos flag null.

Phone home: KV, section nav, character, video, news, world, featu...

phone home, full page

Specimen — m-home-kv

Phone home: KV, section nav, character, video, news, world, featu...

Specimen — m-home-character active item

Phone home: KV, section nav, character, video, news, world, featu...

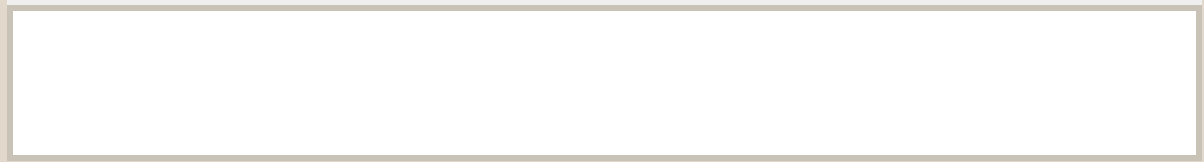

Rendered by the site's own stylesheets at the 1440×900 scale.

Markup (verbatim from the live page; animation inline styles removed):

```
<div data-v-4cbeaaa9="" class="m-home-character__list-item swiper-no-swiping swiper-slide swiper-slide-active" style="width: 390px">
  <div data-v-4cbeaaa9="" class="m-home-character__role">
    
  </div>
  <div data-v-4cbeaaa9="" class="m-home-character__shade">
    
  </div>
  <div data-v-4cbeaaa9="" class="m-home-character__info">
    <div data-v-4cbeaaa9="" class="m-home-character__camp">都市秩序部</div>
    <div data-v-4cbeaaa9="" class="m-home-character__name">赛维里安·洛威尔</div>
  </div>
</div>
```

Specimen — m-section-nav

The section number block of the phone pages.

Markup (verbatim from the live page; animation inline styles removed):

```
<div data-v-4cbeaaa9="" class="character-page-tab__m m-section-nav font-num lg">
  <!-->
  <div class="m-section-nav-inner">
    <div class="m-section-nav-label">角色介绍</div>
    <div class="m-section-nav-en">Characters</div>
    <div class="m-section-nav-num">02</div>
  </div>
</div>

Code — readable/m-news.1415.js lines 5–24 (readable reconstruction of the shipped module; values and control flow unchanged):

```
* Nuxt page component `m-news` for the mobile news-list route `m-lang-news` (layout `m/default`)
*. `asyncData` restores the list from `store.state.newsCache.mNews` when a cached `newsIndex`
exists, otherwise loads the news category tree (`getCates`, `/getChildTree` under `CHANNEL_ID_CONFIG.NEWS.ALL`)
and the first 10 items (`getAllNews`, honoring the `blockGachaAnnounce` getter) from the news API (module 1124),
commits `setNewsCates` and returns `cates`, `cateChan`, `newsList`, `total` and `hasMore`; `mounted` consumes the cache (`setNewsCache` reset) and jQuery
scrolls back to the previously clicked `.m-news-list_item`. It renders the mobile `pageTab` (nav-num 4),
a `m-news-slider_title` (i18n `nav3Label`), a `m-news-tab` of `nuxt-link` category tabs
(`/m/<lang>/news?category=...`, keeping `shareType`) with a sliding `m-news-tab_thumb`,
and a `m-news-list` of banner/date/news-tag/title/summary links to `m-lang-news-id` (or a `news-self-path`
route) whose click (`handlePicClick`) stores the list in `setNewsCache` and tracks `news_pics`;
the `m-news-foot` shows a `load-more` button (`handleMore` -> `getList` appends the next page,
i18n `loadMore`/`loadTxt`) or `no-more` with a `back-top` that animates `html,body` to the top.
Category query changes call `reload`.
*
* Exports (minified key → meaning):
* default → the `m-news` mobile news-list page Vue component (route m-lang-news, compiled with
vue-loader normalizer)
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names and
control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
.
*/

```

RULE FOR A CHILD SITE — Phone pages replace paging with load-more lists, stack the sliders vertically and keep the same record shapes; the section number block (m-section-nav) and the back control are shared pieces.

Buttons and controls inventory

side-camp-item / side-camp-expand-btn	faction filter / expand	character
video-tab__item / news-tab__item	category tab (nuxt-link with ?category)	video, news
mihoyo-pager-rich__button / __prev / __next	pager	video, news
video-list__item	opens the video dialog	video
news-list__item-banner	opens the article (router push)	news
news-detail-back	返回 BACK	article
world__slide	opens the world entry	world
m-header__menu-btn / m-header__menu-close	phone menu	phone pages

OBSERVED — Buttons are divs or anchors with `cursor:pointer`; the only `<button>` elements are the `backTop` button and the SDK forms. The pager and the tabs are the only controls that are real links (`nuxt-link <a href>`), which is why they survive without JavaScript as URLs.

Hover and active states: complete inventory

Chapter 30 · 1 observed · 0 measured · 0 inferred · 1 rules

OBSERVED — 73 rules in the stylesheets target `:hover/:active/:focus`; 17 of the hovered classes produced a computed-style change in headless Chromium on the captured pages (the rest are inside the SDK widgets, inside carousels that were not under the pointer, or need a touch device).

Hovered class	Pages	Node	Computed change	Transition
share__info	character, comp any_privacy	share__panel	transform: none matrix(1, 0, 0, 1, -46.6875, 47.25); height: auto 200.75px; left: 50% 16.3125px; right: auto -77.0625px; bottom: auto -144.5px; display: none block	all

RK5CYII=) }

RULE FOR A CHILD SITE — Hover is restrained: scale 1.1–1.12 on buttons and thumbnails, colour inversion on the more-button (ink on white), opacity reveal of the active tab label, and the two-image swap on the footer copy button. Nothing else moves on hover.

Motion: keyframes, transitions and measured timelines

Chapter 31 · 1 observed · 5 measured · 0 inferred · 1 rules

OBSERVED — 29 distinct @keyframes (van-slide-up-enter, van-slide-up-leave, van-slide-down-enter, van-slide-down-leave, van-slide-left-enter, van-slide-left-leave, van-slide-right-enter, van-slide-right-leave, van-fade-in, van-fade-out, van-rotate, van-circular, mihoyo-share-tips__mask-in, messageBoxScaleIn, messageBoxMaskIn, tada, wordsLoop, wordsLoopMob, loadingLoop-4ed1ddcf, heartbeat, swiper-preloader-spin, onAutoFillStart, onAutoFillCancel, t-spin, user-model-loading, slideToTop, slideLeft, slideRight, slideNextRight) and 141 transition/animation declarations. The site's own motion is small: slideToTop (world slides), wordsLoop/wordsLoopMob (the news summary marquee), heartbeat (music icon), loadingLoop (loader), tada, the Vue transitions page-enter, slide-left/down/bottom/from-rb, zoom, scaleIn, fadeIn, namefade, logoBig/logoSmall; everything else is Swiper's slide/fade or the vendor UI (vant, pdf.js, SDK). Scroll-driven motion uses GSAP ScrollTrigger (pin-spacer/scroller classes in the vendor bundle) and the pages' own scroll listeners.

Keyframes	Steps	Source

Measured timelines (inline style mutations during the first seconds of each page)

MEASURED — m_zh-cn_main: 19 animated elements; first ten: DIV 1023–3628 ms (display, margin, border); BODY 1366–3626 ms (overflow); ios iphone 1367–1367 ms (font-size); hyv-login-platform__loading 1792–1792 ms (1 class changes); swiper-container m-home-character__list 3626–3626 ms (4 class changes); m-home-character__list-item swiper-no-sw 3626–3644 ms (width, opacity, transform); home appear 3627–3627 ms (0 class changes); swiper-container m-home-character__nav 3627–3627 ms (3 class changes); m-home-character__nav-item swiper-no-swi 3627–3627 ms (12 class changes); swiper-container m-home-video__banner-li 3627–3627 ms (3 class changes).

MEASURED — zh-cn_character: 15 animated elements; first ten: DIV 1065–3159 ms (display, margin, border); BODY 1427–3157 ms (overflow); windows desktop 1429–1429 ms (font-size); hyv-login-platform__loading 1918–1918 ms (1 class changes); character appear 3157–3157 ms (0 class changes); swiper-container side-camp-swiper 3158–3158 ms (2 class changes); side-camp-item swiper-slide 3158–3159 ms (margin-bottom); swiper-container cha-pagination-swiper 3158–3158 ms (2 class changes); cha-pagination-item swiper-slide 3158–3159 ms (width); swiper-container cha-swiper 3158–3158 ms (3 class changes).

MEASURED — zh-cn_main: 27 animated elements; first ten: DIV 1133–4223 ms (display, margin, border); BODY 1704–4222 ms (overflow); windows desktop 1705–1705 ms (font-size); hyv-login-platform__loading 2142–2142 ms (1 class changes); swiper-container home-character__list 4222–4222 ms (3 class changes); home-character__list-item swiper-slide 4222–4235 ms (width, opacity, transform); swiper-container home-video__main 4223–4223 ms (3 class changes); home-video__main-item swiper-slide 4223–4223 ms (width, opacity, transform); swiper-container home-feature__list 4223–4223 ms (3 class changes); home-feature__list-item swiper-slide 4223–4223 ms (width, transition-duration, opacity).

Motion: keyframes, transitions and measured timelines - continued

MEASURED — zh-cn_world: 17 animated elements; first ten: DIV 1110–9837 ms (display, margin, border); BODY 1544–5285 ms (overflow); windows desktop 1545–1545 ms (font-size); hyv-login-platform__loading 2025–2025 ms (1 class changes); world appear 3127–3127 ms (0 class changes); m-audio-player__icon 3127–3127 ms (display); m-audio-player__icon m-audio-player__ico 3127–3127 ms (0 class changes); swiper-container world__swiper 3190–3190 ms (2 class changes); world__slide swiper-slide 3190–9842 ms (transform, opacity, transition-duration); world 3220–3220 ms (4 class changes).

MEASURED — World next-slide: [{"element": "world__slide swiper-slide isInitAnim", "first": 6, "last": 828, "n": 1316, "props": {"transform": "translateX(40.432rem) scale(-0.234568) translateX(-40.432rem) scale(-0.234568) (6–828 ms, 279 frames)", "opacity": "0 0 (6–828 ms, 279 frames)", "transition-duration": "800ms 0ms (6–828 ms, 279 frames)", "z-index": "2 2 (6–828 ms, 279 frames)"}, "classes": [], "srcs": []}, {"element": "swiper-wrapper".

RULE FOR A CHILD SITE — Entrances are Vue <transition> classes and Swiper moves; keep durations at 0.3 s (page and slide entrances), 0.8 s for the world carousel, 20 s linear for marquees, and let GSAP ScrollTrigger drive only the scroll-pinned pieces.

Audio: background music, the voice player, mute state

Chapter 32 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — Background music is one MP3 (https://webstatic.hoyoverse.com/upload/static-resource/2022/04/19/aeefeb96a2a294cf1d7ab7324fd9a492_568718570249589416.mp3, 3429 KB) played by the @me/audio library (module 354) behind the m-audio-player component; the header toggle commits muteBgm and the store's bgmMuted drives the icon state (heartbeat animation while playing) and the volume computed in header-bar (0 when muted, 0.8 otherwise). The choice persists in localStorage under napSeaBgAudioOfficial. The character page has a voice player per character (character-voice-player: handleVoiceBtnClick, playMicAni/stopMicAni, updateAudioIns) with a language switcher (switchSubCv); the clips are MP3s named by the character record.

MEASURED — Media hooks on the captured pages: m_zh-cn_character: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_company_privacy: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_company_terms: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_main: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_news: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_news_166535: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_video: 0 play() calls, 15 Audio/AudioContext constructions; m_zh-cn_world: 0 play() calls, 15 Audio/AudioContext constructions. In headless Chromium the music toggle changed store.bgmMuted false false and localStorage napSeaBgAudioOfficial={"createdTime":1791070694320,"cacheTime":0,"data":false}; the voice button animated its --progress property (99.4337% 44.3312% (19–1431 ms, 6001 frames)).

Code — `readable/header-bar.348.js` lines 170–185 (readable reconstruction of the shipped module; values and control flow unchanged):

```
handleBgmClick: function (isPlaying) {
  isPlaying ? this.$trackButton("Media_Music", "1") : this.$trackButton("Media_Music", "0");
},
handleUserClick: function () {
  this.userInfo ? this.$trackButton("login_button", "") : this.$accountRoleUtil.show();
},
logout: function () {
  var logoutSelf = this;
  return Object(vendorBundle.a)(
    regeneratorRuntime.mark(function logoutGenerator() {
      return regeneratorRuntime.wrap(function (context) {
        for (;;)
          switch ((context.prev = context.next)) {
```

Audio: background music, the voice player, mute state - continued

```
case 0:  
    return ((context.next = 2), logoutSelf.$accountRoleUtil.logout());  
case 2:
```

Imagery: bundled assets, CMS images, data URIs, icon font

Chapter 33 · 2 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — 154 asset modules are bundled with the build (url-loader): 67 files under `/_nuxt/img/` and `/_nuxt/fonts/` (hashed names), 87 inlined as data: URIs. The stylesheets reference 46 `url()` files plus 118 data: URIs. Everything editorial — key visuals, character art, banners, world covers, video covers — comes from the CMS on `fastcdn.hoyoverse.com/content-v2/nap/<record>/...` and is named in the records' `sExt` fields.

1386	fill-video-bg.4f4b8d0.png	3b23566
1394	fill-film-bar.0db1011.png	3b23566

MEASURED — Images loaded by the captured pages: 538 (fastcdn.hoyoverse.com 461, zenless.hoyoverse.com 41, webstatic.hoyoverse.com 35, act.hoyoverse.com 1), 138 MB; the largest are character art and key visuals of 2–3 MB each.

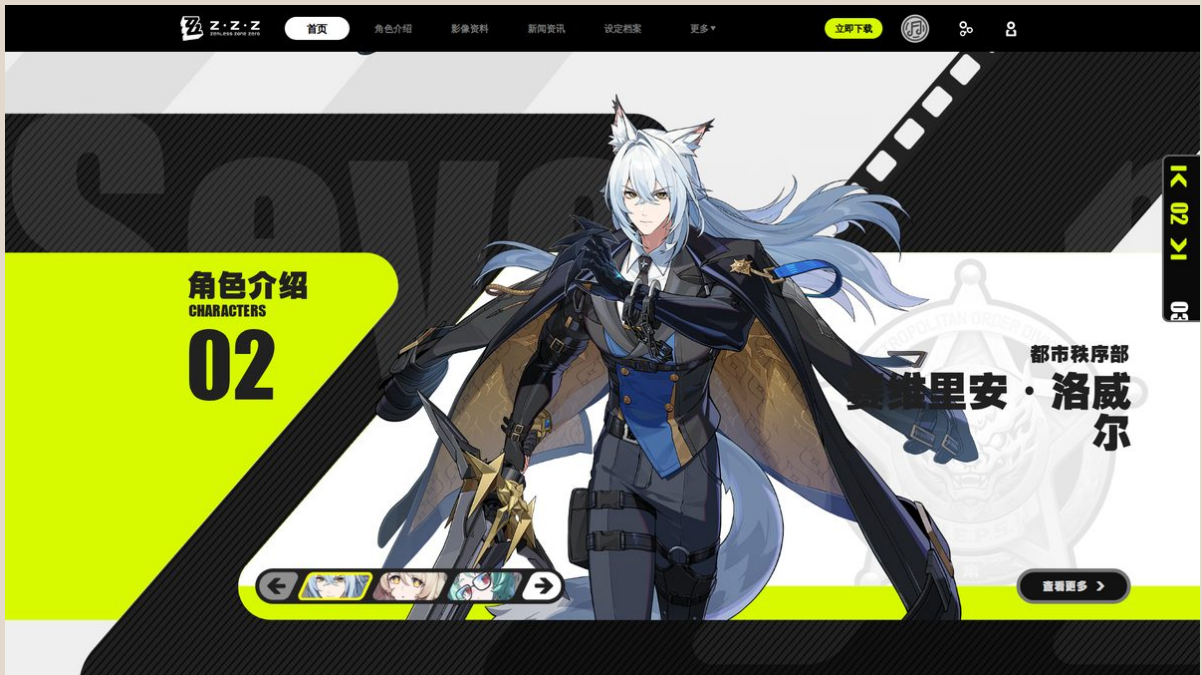

OBSERVED — The icomoon icon font (data: URI in modules 685/703) carries the UI glyphs; the social icons are inline SVG paths rendered by the footer SDK (icon-path-Twitter ...).

Responsive behaviour: two trees, four media queries, measured w...

Chapter 34 · 1 observed · 1 measured · 0 inferred · 0 rules

OBSERVED — The stylesheets contain only 4 media query contexts: @media screen and (orientation:landscape) (6 rules); @media (max-width: 1024px) (4 rules); @media (max-width: 374px) (1 rules); @media (max-width: 300px) (1 rules). Responsiveness is not done with breakpoints: the desktop tree scales every rem with the viewport (clamped at 1440) and the phone tree is a separate layout at designWidth 750; (orientation:landscape) rules adjust the phone pages when the device is turned.

MEASURED — Desktop home at 1920 × 1080: root font-size 75px, horizontal overflow false, sections index 1153px, character 920px, video 889px, news 917px, world 798px, feature 1148px.

home page at 1920 × 1080

```

Code — readable/i18n-language-middleware.340.js lines 5–22 (readable reconstruction of the shipped module; values and control flow unchanged):

```
* Async Nuxt route middleware that initializes i18n for the current language. It resolves the language from the route `lang` param via the locale helpers (module 83, falling back to the `mi18nLang` cookie / default), disables SDK error popups outside development/test via `setCommonConfig`, calls `initAppI18n(Vue, { appId: 'm03111446031031', gameBiz: 'nap_global', env: i18nEnv, lang, zone: 'morax' })` and commits the `setLang` mutation, then returns. The code also contains an (unreachable after the early return) branch that detects language from the cookie or `accept-language` header, sets `Cache-Control: no-cache` and redirects unsupported-language paths to a language-prefixed path or `lang` route.
*
* Exports (minified key → meaning):
*   a → the async i18n/language Nuxt middleware function (context)
*
* Identifiers were renamed scope-aware from the minified bundle; values, strings, class names and control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
*/
// module 340 from 8c4c131.js

```

RULE FOR A CHILD SITE — Keep strings out of components: a per-language dictionary fetched at start, a word() accessor, and the locale in the first path segment.

JavaScript map: chunks, modules, readable reconstructions

Chapter 36 · 1 observed · 0 measured · 0 inferred · 0 rules

OBSERVED — 1457 modules: 995 vendor, 134 first-party or HoYoverse-internal, 65 stylesheets, 154 assets. 107 modules are reconstructed readably (scope-aware renames of the minified bindings; values, strings and control flow unchanged) under `source/readable/`.

Module	Readable file	What it is	Chunk	Minified bytes

Build a child site: the transferable rules

Chapter 39 · 0 observed · 0 measured · 0 inferred · 0 rules

#	Rule
1	Delivery: an SPA shell served for every path (with a static loader inside it), one webpack runtime, two vendor bundles, one app bundle, route chunks on demand, CSS injected per component, SDK scripts loaded before the app.
2	Scale: author in rem on a 2560-wide desktop canvas and a 750-wide phone canvas; $\text{html font-size} = 100 \times \text{clientWidth} \div \text{designWidth}$, clamped to [1440, 2560] on desktop; hide the root until the first value is set.
3	Trees: a desktop route tree and a phone route tree with the same names (m- prefix), chosen by user agent in the shell, sharing the store, the API client and the dictionaries.
4	Data: one content API with <code>getContentList</code> / <code>getContent</code> / <code>getChildTree</code> , channel ids as configuration, records with <code>sTitle</code> / <code>sIntro</code> / <code>sContent</code> (HTML) / <code>sExt</code> (JSON of named images) / <code>dates</code> / <code>iInfoId</code> ; lists page at 7, 9, 10, 50 or 200 as the component needs.
5	Chrome: a fixed 1rem header with a 19.2rem wrapper (logo, five nav entries, more-menu, download, music, share, account); a fixed sidebar pager on the home page; a three-part footer (own social bar + back-to-top, subscription SDK, corporate footer SDK with the language picker).
6	Home: six full compositions (KV + download, characters, videos, news, world, feature) each built from one or two Swiper instances (fade for the stage, slidesPerView auto for strips, loop for banners), a sidebar that both drives and follows the scroll.
7	Inner pages: fade stage + pagination + voice player + faction rail (character); latest slider + tabs (?category) + 9-per-page grid + pager (video and news); a 12.8rem reading column with a back control and an info bar (article); a looped slide deck with <code>slideToTop</code> entrances (world); a document template with a pdf viewer fallback (company).
8	Tokens: ink #222122 on #e8e8e8/#efefef, black panels, accent #d8fa00 (hover #c6e800), white on dark; display faces per language with a language font variable; sizes .16–.46rem; spacing in tenths of a rem; z-index 99 for page chrome, SDK overlays above.
9	Motion: 0.3 s entrances (Vue transitions), Swiper 300 ms slides, 800 ms world slides, 20 s marquee, 0.5 s loader loop; hover = scale 1.1–1.12 or colour inversion only.
10	Audio: one looping background track behind a persisted mute toggle; per-record voice clips with a progress ring.
11	Services you must replace: the content API (host it yourself with the same shapes), the account SDK, the subscription widget, analytics and APM, the download platform list; everything else is a file and is archived on this host.

Interactions measured live: clicks, hovers, scroll, keyboard, resize,...

Chapter 40 · 0 observed · 0 measured · 0 inferred · 0 rules

Everything in this chapter was driven in headless Chromium by [tools/capture-interactions.mjs](#) on 2026-10-03 and recorded in [capture/interactions.json](#). Each row is a real event sent to the live page and the state read back afterwards (route, store, Swiper indexes, computed styles, inline-style mutations, media calls). Where an event produced no change in headless Chromium the row says so; nothing is inferred from the code alone.

A. Root font-size (the rem canvas) per viewport

Viewport	Measured	Formula	Match
2560×1440	100px	100px	yes
1920×1080	75px	75px	yes
1440×900	56.25px	56.25px	yes
1280×720	56.25px	50px (clamped to 1440)	yes
1024×768	56.25px	40px (clamped to 1440)	yes
800×600	56.25px	31.25px (clamped to 1440)	yes

Phone viewport	Measured	100 × width ÷ 750	Match
390×844	52px	52px	yes
375×667	50px	50px	yes
430×932	57.3334px	57.3333px	yes
768×1024	102.4px	102.4px	yes

B. Loader frames

t (ms)	Shell loader	Vue loader	Root mounted
2118	—	—	no
2417	visible	—	no
5096	—	visible	yes
7154	—	—	yes
7154	—	—	yes

Interactions measured live: clicks, hovers, scroll, keyboard, resize,...

Originals archive and self-contained mirror: the real files, data and...

Chapter 41 · 3 observed · 1 measured · 2 inferred · 1 rules

Everything the chapters describe can be opened in its original form on this host. The archive holds, verbatim and with SHA-256 digests, every file the depth-1 pages load (desktop and phone trees), every answer the CMS API gave the pages plus every list page and record those lists name, and the SDK scripts; the mirror serves the original application from those files. Together they close the gaps a document alone cannot: the backend answers, the media, the compiled source and the parts a headless capture could not render are here as files, not descriptions.

A. What is archived

OBSERVED — Archived on 2026-10-04: 1398 files (452.3 MB), 120 CMS answers covering 81 news records and 3 world entries; 751 of the 1599 media files named by the archived records are included and 376 were left on the CDN by the size budget. The site's own build files live at `/_nuxt/` under their original names (chunks, fonts, images), every other host under `archive/files/<host>/...`; each entry in `archive/index.json` carries its URL, size and SHA-256.

Kind	Files	Bytes
png	955	286.2 MB
gif	11	71.9 MB
mp3	231	43.3 MB
jpg	86	38.8 MB
js	65	8.2 MB
woff2	2	3.7 MB
html	26	207 KB
TTF	1	135 KB
woff	1	66 KB
json	10	27 KB
css	1	17 KB
svg	9	12 KB

Originals archive and self-contained mirror: the real files, data and...

B. The backend, as the pages saw it

OBSERVED — The CMS answers are under archive/api/, keyed by host + path + query with the parameters sorted, so the adapter can answer the client's own parameter order. 33 list pages, 84 records, 2 channel trees. The API refuses cross-origin browsers (no Access-Control-Allow-Origin for other origins), so a static host must answer these itself — the mirror does.

... 90 more in archive/api/index.json			index

INFERRED — What cannot be archived: the per-session answers of the SDK services (ip_location, device fingerprint, cookie-token verification, subscription state, event and APM logging). The mirror lets those calls go to their hosts, where the browser blocks them for a foreign origin exactly as on the local mirror; a child site replaces them with its own consent, login and analytics.

C. The mirror

OBSERVED — The mirror is the archived shell served at every route of both trees (— pages: the five sections, the company documents, — archived articles and — world entries, plus 404.html so the SPA router answers any other path), with two changes made only in the document head: the CDN references in the shell point at the archive, and one adapter script (mirror/adapter.js) answers the CMS API from the archive, serves i18n JSON and archived media from this host, and lets anything not archived reach its original URL. — CMS answers and — SDK files are served from rewritten copies under mirror/ (media URLs pointed at the archive); the originals stay untouched. Routes: /zh-cn/main, /zh-cn/character, /zh-cn/video, /zh-cn/news, /zh-cn/world, /zh-cn/company/privacy, /zh-cn/company/terms, /m/zh-cn/main.

MEASURED — tools/verify-mirror.mjs loaded the mirror from a plain static server: 15 of 15 checks passed — home: loader finished from the archive; home: header, six sections and footer rendered; home: CMS API answered from this host (no request reached sg-public-api-static); home: nothing fetched from the live CDN or the live site; home: character and video swipers populated; client navigation to the character page (router push, no reload); news index: list, tabs and pager from the archive; news index: second tab answered from the archive; article 166535: renders its archived record; article 166535: images served from this host where archived; world page: slides from the archive; handbook route /zh-cn/news/7013 renders the handbook inside the news template; mobile tree: /m/zh-cn/main renders the mobile home from the archive; no JavaScript errors from the site code; no missing files on this host.

```
// mirror adapter, excerpt - mirror/adapter.js (built by tools/build-mirror.mjs)
const canonical = u => { const x = new URL(u, location.href); const q = [...x.searchParams.entries()].sort(...).map(([k, v]) => k + '=' + v).join('&'); return x.host + x.pathname + (q ? '?' + q : ''); };
const answer = u => { const k = canonical(u); for (const [re, file] of Object.entries(OVERRIDE))
  if (new RegExp(re).test(k)) return file; return API[k] || null; };
XMLHttpRequest.prototype.open = function (m, u, ...r) { if (m === 'GET') { const a = answer(u);
  if (a) u = location.origin + a; else { const l = localFile(u); if (l) u = l; } } return open.call(this, m, u, ...r); };
// this handbook page: window.__MIRROR_OVERRIDE = { 'getContent\\?.*iInfoId=7013': '/handbook/handbook-content.json' }
```

Originals archive and self-contained mirror: the real files, data and...

D. What this changes for a child site

RULE FOR A CHILD SITE — Build the backend to answer the archived requests in the archived shapes (archive/api/index.json is the contract), serve media from your own CDN with the same record fields, keep the SDK calls behind your own consent and login, and use the mirror as the reference rendering: open a mirrored page and a child page side by side at 1440×900 and at 390×844 and compare.

INFERRED — With the archive and the mirror on the same host as this handbook, the only things a reader cannot take from here are HoYoverse's live services and the rights to the material: everything that can be a file is a file.

Visual record: every captured screenshot

[capture/pages](#) · [capture/interactions](#) · [verification](#) · 2026-10-03/04

Every screenshot taken while the site was captured and measured, in the order the capture scripts produced them. They are the visual counterpart of the measurements in the chapters: the chapters give the numbers, these show what the numbers describe. All were taken in headless Chromium on 2026-10-03 and 2026-10-04 against the live site (desktop tree at 1440×900 and 1920×1080, phone tree at 390×844).

邦布

小小的身体，大大的用处
当你走在街头，看到一个发出“嗯嗯呢呢”声音的小小身影，请不要被吓到。这是新艾利都特有的风光之一，小型智能设备——邦布。邦布只有成人膝盖那么高，但他们却是新艾利都城市运转不可或缺的得力助手。经过多年的生产研发，如今邦布的综合应用场景非常广泛，很多工厂也会提供定制服务，以便不同人群使用特定功能的邦布。

邦布可以用来做什么？
邦布最初诞生的目的是帮助新艾利都居民进行空洞灾害的避难行动，当新艾利都生活区域内出现空洞灾害时，每一台邦布都会第一时间从公用网络上接受到灾情信息与避难指引，他们会帮助自己身边的人群规避灾害。现如今，因更成熟的技术和多样的需求，邦布已经从单纯的避灾用小型辅助智能机械变为了更为综合泛用的智能个体，甚至有专业版的邦布会与调查员一起深入空洞进行灾害调查。

Verification of the handbook page and the mirror

Screenshots from the verification runs: the original application rendering the handbook as a news record (desktop and phone trees), and the mirrored home page served from the archive.

Appendix A: The 65 stylesheet modules, complete and beautified

capture/css · one file per css-loader module, extracted from the chunks · prettier output · no rule changed, no select...

The site ships no stylesheet files: these are the css-loader modules extracted from the chunks exactly as vue-style-loader injects them, with the url() targets resolved the way css-loader resolves them at run time (/_nuxt/... and data: URIs), reformatted with prettier. Each file is named by its webpack module id; the first table column gives the first selector and the chunks that carry the module.

#	Module	First selector	Chunks	Bytes	Lines	Blocks styled

Appendix B: The readable first-party JavaScript, complete

source/readable · minified identifiers renamed scope-aware · values and control flow unchanged

Each file is one webpack module of the site's own code (pages, layouts, components, the store, the API clients, the plugins and the HoYoverse-internal request layer), split out of its chunk, with every minified identifier renamed to a meaningful one (library aliases resolved from the module map, locals named for what they hold). The header comment of each file states its origin, exports and a summary. Vendor libraries are not reprinted; their names are in the JavaScript map chapter.

B.4 axios-xhr-adapter

axios-xhr-adapter.439.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/axios-xhr-adapter.439.js> ...

axios's browser XHR adapter (`lib/adapters/xhr.js`, CommonJS). It returns a Promise that builds an `XMLHttpRequest` from the request config: strips `Content-Type` for FormData, adds HTTP Basic `Authorization`, combines `baseUrl`/`url` and serializes `params`, sets `timeout`, `withCredentials`, `responseType`, XSRF header from the cookie when same-origin or credentialed, request headers and progress listeners; on load it parses response headers and settles the promise via `settle`, rejects with `createError` on abort (`ECONNABORTED`), network error or timeout (`ETIMEDOUT` when `transitional.clarifyTimeoutError`), and supports cancellation through `cancelToken` and `AbortSignal` (rejecting with a `Cancel('canceled')`).

```

B.11 character

character.1439.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/character.1439.js> · chunk 3f59e7...

Nuxt page component `character` for the desktop character route `lang-character` (`scrollToTop`). `asyncData` loads the camp list (`getCampList`, channel `CHANNEL\_ID\_CONFIG.CHARACTER.CAMP`) and all characters (`getAllCharacter`) from the character API (module 1154), redirects to `main` when there are none, commits `setCharacterCamps`, pads `renderCampList` to a multiple of 4 with empty camps, and derives `activeIndex`, `chaList`, `curActiveCha`/`curActiveChaIdx` from `query.id` plus a lazy fade `chaSwiperOption`; `head()` builds title and description/og/twitter meta from the active character's `sTitle` and `word`. It renders the desktop `pageTab` (nav-num 2, themed), a client-only fade vue-awesome-swiper (ref `chaSwiper`) of lazy `character-cover` slides with `character-info` (level icon, name, `Mont-Heavy` English name scaled by `updateEnNameScale`, a `character-voice-player`, prop icons, `character-info-word` and a `vue-scroll` (vuescroll) intro), a 3-per-view `cha-pagination-swiper` with arrow buttons, a vertical looped `side-camp-swiper` whose sticky position/height `updateSideCampStyle` recomputes on window `resize`/`scroll`, a `character-camp-selection` overlay (`selection\_\_`, animated by a `\$gsap` timeline) and hidden SEO `character-detail-link` nuxt-links. Voice playback uses `eventAudio` from module 354 with a looping `\$gsap` `--progress` mic animation, `loadEnFont` loads the `Mont-Heavy` FontFace from modules 558/559, `preloadImages` calls the swiper `lazy.loadInSlide`, and the `curActiveCha` watcher syncs the swiper and `\$router.replace`s `query.id`; clicks are tracked with `\$trackButton` (`character\_voice`, `camp\_change`, `view\_all\_camp`/`all\_camp\_back`).

B.12 ClientOnly-functional-component

ClientOnly-functional-component.324.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/ClientOnly...>

The `ClientOnly` functional Vue component (from the vue-ClientOnly package used by Nuxt). Until its parent is mounted it renders either a placeholder element (tag from the `placeholderTag` prop, default `div`, with class `.client-only-placeholder`, content from the `placeholder` prop or the `placeholder` slot) or empty comment nodes; it registers a one-time `hook:mounted` listener on the parent that calls `\$forceUpdate()`, after which the default slot content is rendered client-side.

```

B.13 cookie-universal

cookie-universal.525.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/cookie-universal.525.js> · c...

Bundled `cookie-universal` library (a self-contained webpack bundle with its own module runtime) that also embeds the `cookie` package (`parse`/`serialize`). The exported factory `(req, res, parseJSON = true)` detects client vs server context and returns an API `{ parseJSON, set, setAll, get, getAll, remove, removeAll, nodeCookie }` that reads cookies from `document.cookie` or the request `cookie` header / response `Set-Cookie` headers, writes via `document.cookie` or `res.setHeader('Set-Cookie', ...)` , JSON-stringifies object values and optionally JSON-parses values on read; removal sets `expires` to epoch. The embedded serializer validates names/values and supports Max-Age, Domain, Path, Expires, HttpOnly, Secure and SameSite.

```

B.15 core-js-native-URL-detection

core-js-native-URL-detection.493.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/core-js-native-U...>

core-js internal feature-detection module (`native-url`): it exports a boolean that is true when the native `URL`/`URLSearchParams` implementation is correct, checking pathname encoding, `searchParams` iteration/deletion and `sort`, `href`, `URLSearchParams` string conversion and copy construction, the iterator symbol, `username` parsing, punycode host conversion (`xn--e1aybc` for `http://`), hash encoding and an undefined base argument (with an extra `toJSON` check in pure mode).

```

B.19 feature

feature.1440.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/feature.1440.js> · chunk 44468dc · ...

Nuxt page component `feature` for the desktop route `lang-feature`. `asyncData` calls the Nuxt `redirect` to `lang-main` unconditionally and also loads the feature list via the home content API (module 1164) `getFeature` (`/getContentList`, channel `CHANNEL\_ID\_CONFIG.FEATURE`) with `sLangKey: store.state.lang`, exposing it as `featureList`; `created` sets `activeFeature` to the first entry. It renders the desktop `pageTab` (nav-num 6), a `feature\_\_title` font-num heading with the i18n `nav4Label`, and a vue-awesome-swiper `swiper` (ref `featureSwiper`, centered `auto` slides, `swiper-pagination`) of `feature\_\_slide` banners (`bannerInner`) plus, when there is more than one feature, `swiper-button-prev`/`swiper-button-next` arrows in `feature\_\_navigation` whose clicks call `handleNavigatorUpload` (`\$trackButton("features\_next")`). `slideChange` sets `activeFeature` from the swiper `realIndex`, and the active feature's title and HTML content (`sContent` or `summary`) render in `feature\_\_info`; `head()` builds the title from i18n `nav4` + `seoTitlePrefix`.

```

B.20 @firebase-util-helpers

firebase-util-helpers.1165.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/firebase-util-helpers...>

Vendored @firebase/util helpers (wrapped with the global object, module 42, and process, module 120). It includes UTF-8 string-to-bytes conversion and a base64 codec (standard and web-safe alphabets, DecodeBase64StringError), base64urlEncodeWithoutPadding/base64Decode, lookup of __FIREBASE_DEFAULTS__ from the global, process.env or a cookie (getDefaultAppConfig returns its config), a Deferred promise wrapper with wrapCallback, isIndexedDBAvailable, validateIndexedDBOpenable (opens and deletes the probe database "validate-browser-context-for-indexeddb-analytics-module"), areCookiesEnabled, FirebaseError plus ErrorFactory (fills {\$key} templates into "<serviceName>: <message> (<service>/<code>)."), deepEqual and getModularInstance.

```
1  /**
2   * @firebase-util-helpers – readable reconstruction of webpack module 1165 (chunk 8d80f48.js)
3   * Original: https://zenless.hoyoverse.com/\_nuxt/8d80f48.js
4   *
5   * Vendored @firebase/util helpers (wrapped with the global object, module 42, and process, module 120). It includes UTF-8 string-to-bytes conversion and a base64 codec (standard and web-safe alphabets, DecodeBase64StringError), base64urlEncodeWithoutPadding/base64Decode, lookup of __FIREBASE_DEFAULTS__ from the global, process.env or a cookie (getDefaultAppConfig returns its config), a Deferred promise wrapper with wrapCallback, isIndexedDBAvailable, validateIndexedDBOpenable (opens and deletes the probe database "validate-browser-context-for-indexeddb-analytics-module"), areCookiesEnabled, FirebaseError plus ErrorFactory (fills {$key} templates into "<serviceName>: <message> (<service>/<code>)."), deepEqual and getModularInstance.
6   *
7   * Exports (minified key → meaning):
8   *   a → Deferred class (promise with resolve/reject and wrapCallback)
9   *   b → ErrorFactory class (service, serviceName, errors) with create(code, data)
10  *   c → FirebaseError class (code, message, customData)
11  *   d → areCookiesEnabled()
12  *   e → base64urlEncodeWithoutPadding(str)
13  *   f → deepEqual(a, b)
14  *   g → getDefaultAppConfig() from __FIREBASE_DEFAULTS__
15  *   h → getModularInstance(instance) (unwraps _delegate)
16  *   i → isIndexedDBAvailable()
17  *   j → validateIndexedDBOpenable() -> Promise<boolean>
18  *
19  * Identifiers were renamed scope-aware from the minified bundle; values, strings, class names and control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md

B.21 footer-bar

footer-bar.203.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/footer-bar.203.js> · chunk 8c4c131...

Vue component `footer-bar`, the site footer. On mount it initializes the external `window.HYVFooter` widget on `#footer` (biz `nap\_global`, locale from `\$store.state.lang`, supported locales from `HoYoverseMi18n.d`, selector hidden on `\$isBBS`) and on language change collapses the footer, calls `setLang`, commits the `setLang` mutation and reloads the page with the language segment replaced in the URL. It renders `.footer` / `.footer\_\_wrap` with a `backTop` button on the main/news routes, a `.footer\_\_socialbar` with `media-icon` (bound to `\$store.getters.mediaConfig`, tracking follows via `\$trackButton('go\_media', ...)`) and a `hover-btn.copy-btn` that copies the `shareCopyText` via `\$clipboard` and toasts with `\$mtoast`, plus a `.footer-crm` `crm-sub` subscription widget (shown unless `\$store.state.isEnIp`, i18n key `m20231213hy4784y0w0`, event key `nap\_official\_crm`).

5   * Vue component `footer-bar`, the site footer. On mount it initializes the external `window.HYV
6   Footer` widget on `#footer` (biz `nap_global`, locale from `$store.state.lang`, supported loca
7   les from `HoYoverseMi18n.d`, selector hidden on `$isBBS`) and on language change collapses the
8   footer, calls `setLang`, commits the `setLang` mutation and reloads the page with the languag
9   e segment replaced in the URL. It renders `.footer` / `.footer__wrap` with a `backTop` button
10  on the main/news routes, a `.footer__socialbar` with `media-icon` (bound to `$store.getters.me
11  diaConfig`, tracking follows via `$trackButton('go_media', ...)`) and a `hover-btn.copy-btn` t
12  hat copies the `shareCopyText` via `$clipboard` and toasts with `$mtoast`, plus a `.footer-crm
13  ` `crm-sub` subscription widget (shown unless `$store.state.isEnIp`, i18n key `m20231213hy4784
14  y0w0`, event key `nap_official_crm`).

B.23 GSAP-ScrollToPlugin-3.10.4

GSAP-ScrollToPlugin-3-10-4.722.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/GSAP-ScrollTo...>

Vendored GSAP ScrollToPlugin v3.10.4 (name "scrollTo"). It lazily grabs gsap (window.gsap or the registering instance), sets autoKillThreshold 7, and tweens window or element scrollLeft/scrollTop toward numeric, relative ("+="/"-="), "max" or element targets with offsetX/offsetY, temporarily disabling scroll-snap-type and auto-killing the tween when the user scrolls away (calling onAutoKill). It also exposes max, getOffset and buildGetter helpers and self-registers when gsap is on window.

B.24 header-bar

header-bar.348.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/header-bar.348.js> · chunk 8c4c...

Vue component ``header-bar``, the desktop site header; it extends the ``base`` mixin and registers ``headerSocial``. On mount it creates a ``window.MeSeaDownload.DownloadCore`` instance (gameBiz ``nap_global``, type ``fab``, source ``262``) used by the download nav button; left navs come from ``HoYoverseMi18n.e`` (minus ``feature``) plus a ``menu_more_label`` group of exchange/top_up/community external links resolved via ``$getI18nWord``. It renders ``header.header`` / ``.header-wrapper`` with the ``.header__logo`` (big/small logos switched by ``$store.state.homeSection`` on ``lang-main``), ``.header__navbar-links`` / ``.header__navbar-link(--active)`` items with ``.nav-content-sub`` dropdowns, ``.header__navbar-btns`` with the download button, a ``me-audio`` ``.header__bgm`` BGM player (volume from ``$store.state.bgmMuted``, storage key ``napSeaBgAudio``), ``header-social``, a ``.login`` block with ``.login__dropdown`` and logout, and a hidden ``account-role`` component. It reads ``$store.state.lang`/`userInfo``, commits ``setUserInfo`` and ``setRoutePage``, navigates to ``lang-<link>`` routes with `lodash`` ``.omit`` query cleanup, and tracks via ``$trackEvent`/`$trackButton``.

B.25 header-social

header-social.262.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/header-social.262.js> · chunk ...

Vue component ``header-social``, the share/follow popover in the header. It renders ``share`` > ``share__info`` with a ``share__icon`` trigger and, client-only, a ``share__panel`` / ``share__panel-wrap`` containing a ``share__title`` (``socialFollow`` i18n text) and a ``share__list`` with ``media-icon`` bound to ``$store.getters.mediaConfig`` plus a ``hover-btn.copy-btn`` in the ``extra-media-end`` slot. Methods track ``Media_Share``, ``Media_Sub_Follow`` and ``Media_Sub_Share`` via ``$trackButton``, and the copy button copies ``shareCopyText`` with ``$clipboard`` and shows ``copySuccess`` via ``$mtoast``.

```

B.27 HoYoverse-OSS-file-upload-SDK

HoYoverse-OSS-file-upload-SDK.531.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/HoYoverse...>

Bundled HoYoverse/miHoYo OSS file-upload SDK (a self-contained webpack bundle with its own module runtime, depending on a SparkMD5 module and a file-encryption module). `ossFileUpload(options)` validates `env`, computes the file MD5 by reading 2MB chunks with `FileReader` + `SparkMD5.ArrayBuffer`, requests upload parameters from one of many takumi / sg-public-op / sg-public-api endpoints (e.g. `/upload/op/getParamsByOp`, `/upload/outer/getParamsByAccount`, `/upload/outer/GetParamsByAuthKey`, `/mupload/minio/getToken`) selected by inland/overseas, inner/outer, AWS (`s3`), login type and environment, then uploads via XHR as an OSS POST form (OSSAccessKeyId/policy/signature), an S3/SGW `PUT` with signed headers, or a private MinIO form; it also supports fetching remote URLs (`/upload/op/fetch`), optional client-side encryption (`encryptFromFile`), progress callbacks, `x-rpc-language`/`X-Rpc-App\_key` headers and an optional watermark call to `/upload/op/watermark`. `ossFileBatchUpload` uploads multiple files to inland, overseas (`os`) or `both` areas and reports success/error lists, and the default export also provides a Vue `install` adding `\$OssFileUpload`/`\$OssFileBatchUpload`.

6   * Bundled HoYoverse/miHoYo OSS file-upload SDK (a self-contained webpack bundle with its own mo
7   * dule runtime, depending on a SparkMD5 module and a file-encryption module). `ossFileUpload(opt
8   * ions)` validates `env`, computes the file MD5 by reading 2MB chunks with `FileReader` + `Spark
9   * MD5.ArrayBuffer`, requests upload parameters from one of many takumi / sg-public-op / sg-publi
10  * c-api endpoints (e.g. `/upload/op/getParamsByOp`, `/upload/outer/getParamsByAccount`, `/upload
11  * /outer/GetParamsByAuthKey`, `/mupload/minio/getToken`) selected by inland/overseas, inner/oute
12  * r, AWS (`s3`), login type and environment, then uploads via XHR as an OSS POST form (OSSAccess
13  * KeyId/policy/signature), an S3/SGW `PUT` with signed headers, or a private MinIO form; it also
14  * supports fetching remote URLs (`/upload/op/fetch`), optional client-side encryption (`encrypt
15  * FromFile`), progress callbacks, `x-rpc-language`/`X-Rpc-App_key` headers and an optional water
16  * mark call to `/upload/op/watermark`. `ossFileBatchUpload` uploads multiple files to inland, ov
17  * erseas (`os`) or `both` areas and reports success/error lists, and the default export also pro
18  * vides a Vue `install` adding `$OssFileUpload`/`$OssFileBatchUpload`.
19  *
20  * Exports (minified key → meaning):
21  *   module.exports → the SDK default export { ossFileUpload, ossFileBatchUpload, install(Vue) }
22  *
23  * Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
24  * nd
25  * control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
26  * .

B.28 i18n-language-middleware

i18n-language-middleware.340.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/i18n-language-...>

Async Nuxt route middleware that initializes i18n for the current language. It resolves the language from the route `lang` param via the locale helpers (module 83, falling back to the `mi18nLang` cookie / default), disables SDK error popups outside development/test via `setCommonConfig`, calls `initAppI18n(Vue, { appId: 'm03111446031031', gameBiz: 'nap\_global', env: i18nEnv, lang, zone: 'morax' })` and commits the `setLang` mutation, then returns. The code also contains an (unreachable after the early return) branch that detects language from the cookie or `accept-language` header, sets `Cache-Control: no-cache` and redirects unsupported-language paths to a language-prefixed path or `lang` route.

lang-main.1446.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/lang-main.1446.js> · chunk ce90...

Nuxt page component for the desktop route `lang-company-privacy` (layout `empty`), the privacy-policy page. In `asyncData` it calls the CMS content API (module 1118) `getPrivacy`, which fetches the `/getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.PRIVACY`, passing `sLangKey: store.state.lang`; when nothing is returned it redirects to `lang-main` (with `params.lang = store.state.lang`), otherwise it exposes `title`, `content` and `pdfUrl` (from `sTitle`/`sContent`/`pdfUrl`) as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function shows, inside `client-only`, either a `protocol-pdf` (HoYoverse PDF viewer, module 1131, with `is-mob` = false and `pdf-url`) when `pdfUrl` is set, or the `protocol` text component (desktop protocol, module 1142) with `title`/`content`.

B.34 lang-main

lang-main.1447.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/lang-main.1447.js> · chunk c367...

Nuxt page component for the desktop route `lang-company-terms` (layout `empty`), the terms-of-service page. In `asyncData` it calls the CMS content API (module 1118) `getUser`, which fetches the `/getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.TERMS`, passing `sLangKey: store.state.lang`; when nothing is returned it redirects to `lang-main` (with `params.lang = store.state.lang`), otherwise it exposes `title`, `content` and `pdfUrl` (from `sTitle`/`sContent`/`pdfUrl`) as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function shows, inside `client-only`, either a `protocol-pdf` (HoYoverse PDF viewer, module 1131, with `is-mob` = false and `pdf-url`) when `pdfUrl` is set, or the `protocol` text component (desktop protocol, module 1142) with `title`/`content`.

lang-main.1448.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/lang-main.1448.js> · chunk 5e4f...

Nuxt page component for the desktop route `lang-company-terms2` (layout `empty`), the secondary terms page (terms2). In `asyncData` it calls the CMS content API (module 1118) `getTerms2`, which fetches the `/getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.TERMS2`, passing `sLangKey: store.state.lang`; when nothing is returned it redirects to `lang-main` (with `params.lang = store.state.lang`), otherwise it exposes `title`, `content` and `pdfUrl` (from `sTitle`/`sContent`/`pdfUrl`) as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function shows, inside `client-only`, either a `protocol-pdf` (HoYoverse PDF viewer, module 1131, with `is-mob` = false and `pdf-url`) when `pdfUrl` is set, or the `protocol` text component (desktop protocol, module 1142) with `title`/`content`.

B.38 lang-news

lang-news.1451.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/lang-news.1451.js> · chunk 0d50...

Nuxt page component for the desktop news-article route `lang-news-id` (`scrollToTop`). `validate` only accepts numeric `params.id`; `asyncData` loads the article via the news API (module 1124) `getDetail` with `iInfoId: params.id`, `iChanId: CHANNEL\_ID\_CONFIG.NEWS.ALL` (app bundle, module 28) and `sLangKey: store.state.lang`, redirecting to `lang-news` on error, and exposes it as `newsContent`; `head()` uses its title plus i18n `seoTitlePrefix`. It renders `news-detail` with a `nuxt-link` back button to `lang-news` (`news-detail-back back-btn`, `backArrow`/`backText` i18n `textBack`/`backSubtext`) that tracks `news\_back` with the article id via `\$trackButton`, then the `news-detail\_\_title`, a `news-detail\_\_info` breadcrumb (i18n `gameName` > `news-tag` for `sChanId[0]`) with `dateFormat`, the HTML `sContent` in `news-detail\_\_content`, and a `backTop` (module 347, theme `reverse`) in `backContainer`.

```

B.39 lang-world

lang-world.1452.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/lang-world.1452.js> · chunk 8c53...

Nuxt page component for the desktop world-entry detail route ``lang-world-id`` (``scrollToTop``). ``validate`` only accepts numeric ``params.id``; ``asyncData`` loads the entry via the world API (module 1152) ``getDetail`` (``getContent``, channel ``CHANNEL_ID_CONFIG.WORLD``) with ``iInfoId: params.id`` and ``sLangKey: store.state.lang``, raising a Nuxt 404 ``error`` on failure, and exposes it as ``worldContent`` (its ``sTitle`` plus `i18n `seoTitlePrefix`` is the ``head()`` title). It renders ``world-detail`` with the desktop ``pageTab`` (nav-num 5), a ``world-detail__back`` ``nuxt-link`` to ``lang-world`` with ``params.worldId``, and a ``world-detail__article`` (ref ``desc``) holding ``scaleIn`` transitions around a client-only vue-awesome-swiper (ref ``worldSwiper``, ``swiper-pagination`` plus ``swiper-button-prev/next``, shown when ``banner`` has more than one image) of ``banner`` images whose click calls ``gotoDetail``, the entry title and HTML ``sContent``. A ``world-detail__more`` toggle (`i18n `learnMore`/`textFold``) runs ``handleMore``, which expands the article to ``height: auto`` or collapses it back to ``8.5rem`` and scrolls the window to the top with jQuery ``$(window).scrollTop(0)``.

```

B.40 loading-screen-component

loading-screen-component.250.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/loading-screen-co...>

Anonymous loading-screen Vue component. It renders `.loading` with a hidden `.loading__field` that preloads each entry of its `source` list as an `img`, `video` or `audio` element (advancing progress on `load`/`canplaythrough`) and a `.loading__anim` animation block. On mount it sets the `isLoading` computed (backed by `$store.state.isLoading` / the `setLoading` mutation) to true and locks `document.body` scrolling; the `step` method increments `progress` by 5 on timers until 100, then `onLoaded` emits `loaded`, clears `isLoading` and restores body overflow.

```

B.41 locale-and-route-path

locale-and-route-path.83.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/locale-and-route-path...>

Routing/locale helper functions built on the site constants module (`HoYoverseMi18n``, module 49) and a cookie library (module 40). It exports a matcher that tests a path against the configured path list (strings or RegExps), a route-name normalizer that falls back to the ``lang`` key, a builder that prefixes a path with the language segment (keeping or dropping the mobile ``m`` prefix), a language resolver that validates against the supported locales or falls back to the ``mi18nLang`` cookie / default language, and a query sanitizer that strips the ``catchSpider`` key.

```

B.42 localStorage---memory

localStorage---memory.500.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/localStorage---memo...>

Cache utilities module (ES module named exports). It provides localStorage helpers that store values wrapped as JSON `{ timestamp, value }` (`setLocalStorageCache`, `getLocalStorageCache`, `removeLocalStorageCache`, `getLocalStorageInfo`) and an in-memory `memoryCache` object (backed by a closure map) with `set`, `get`, `remove` and `getInfo` methods using the same timestamped record shape.

```
1  /**

B.43 m-cha

m-cha.1423.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-cha.1423.js> · chunk 564bae5 · 1079...

Nuxt page component `m-cha` for the mobile character route `m-lang-character` (layout `m/default`, `scrollToTop`). `asyncData` loads the camp list (`getCampList`, channel `CHANNEL\_ID\_CONFIG.CHARACTER.CAMP`) and all characters (`getAllCharacter`) from the character API (module 1154), redirects to `m` when there are none, commits `setCharacterCamps`, and derives `activeIndex` (camp) and `curActiveChaIdx` from `query.id`, plus a fade-effect `chaSwiperOpts`; `head()` builds title and description/og/twitter meta from the active character's `sTitle` and `word`. It renders the mobile `pageTab` (nav-num 2, themed by `themeColor`), a fade vue-awesome-swiper (ref `chaSwiperRef`) of `character-swiper-slide` covers with `character-info` (prop/level icons, name, a `character-voice-player` with CV name and language switcher, and a `vue-scroll` (vuescroll) description), prev/next `switch-button`s, a horizontally scrolling `character-pagination`, the active `character-camp` button and a `character-camp-selection` overlay animated with a `\$gsap` timeline, plus hidden SEO `character-detail-link` nuxt-links. Voice playback uses `eventAudio` from module 354 (stop/unload/switchSrcIndex/play, `\$mtoast` i18n `textSoon` when empty) with a looping `\$gsap` `--progress` mic animation; the `curActiveCha` watcher rebuilds the audio, scrolls the pagination via `\$flex('rem')`, syncs the swiper and `\$router.replace`s `query.id`, and clicks are tracked with `\$trackButton` (`character\_voice`, `view\_all\_camp`/`all\_camp\_back`, `camp\_change`).

B.44 m-feature

m-feature.1424.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-feature.1424.js> · chunk ded6...

Nuxt page component ``m-feature`` for the mobile route ``m-lang-feature`` (layout ``m/default``). ``asyncData`` calls the Nuxt ``redirect`` to ``m-lang-main`` unconditionally and also loads the feature list via the home content API (module 1164) ``getFeature`` (``/getContentList``, channel ``CHANNEL_ID_CONFIG.FEATURE``) with ``sLangKey: store.state.lang``, exposing it as ``featureList``; ``created`` sets ``activeFeature`` to the first entry. It renders the mobile ``pageTab`` (nav-num 6), a ``m-feature__title`` with the i18n ``nav4Label``, and a vue-awesome-swiper ``swiper`` (ref ``featureSwiper``, centered ``auto`` slides with ``.swiper-pagination`` / ``.swiper-button-next/prev``) of ``m-feature__slide`` banners (``bannerInner``), whose ``slideChange`` handler sets ``activeFeature`` from ``realIndex``; the active feature's title and HTML content (``sContent`` or ``summary``) are shown in ``m-feature__info``. ``head()`` builds the title from i18n ``nav4`` + ``seoTitlePrefix``, and ``handleNavigatorUpload`` tracks the ``m-features_next`` button via ``$trackButton``.

B.45 m-header-bar

m-header-bar.349.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-header-bar.349.js> · chunk 8...

Vue component ``m-header-bar``, the mobile site header. It extends the shared ``base`` mixin, registers ``headerSocial``, builds its nav list from ``HoYoverseMi18n.e`` plus `i18n`-driven extra links (exchange/top_up/community under a ``menu_more_label`` group and ``menu_care_link``), and renders ``m-header`` with the logo (``m-header__logo``, ``logo-icon``, ``logoSmall-img``), a download button (``m-header__download`` calling ``$downloadIns.download()``), a ``me-audio`` BGM player (``m-header__bgm``, storageKey ``napSeaBgAudio``), a slide-in menu panel (``m-header__menu``, ``m-header__menu-link``, ``nav-content-sub``) and login/user info blocks (``header-user-info``, ``header-login-btn``). It reads ``$store.state.lang``, ``bgmMuted``, ``homeSection``, commits ``muteBgm``, navigates via ``$router.push({ name: 'm-lang-<link>' })``, tracks clicks with ``$trackEvent`/`$trackButton``, uses `lodash`_.omit``, ``$clipboard``, ``$mtoast``, ``$mJump`` and ``$accountRoleUtil.show()``, and toggles ``showMenuBtn`/`isStartScroll`` from the window scroll position.

```

B.46 m-lang-main

m-lang-main.1428.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-main.1428.js> · chunk ...

Nuxt page component for the mobile route `m-lang-company-about` (layout `empty`), the company "about" page. In `asyncData` it calls the CMS content API (module 1118) `getJpAbout`, which fetches `getContent` for info id `INFO\_ID\_CONFIG.ABOUT` in channel `CHANNEL\_ID\_CONFIG.PROTOCOL.JP\_FUND`, passing `sLangKey: store.state.lang`; when nothing is returned it redirects to `m-lang-main`, otherwise it exposes `title` and `content` (from `sTitle`/`sContent`) as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function shows the `protocol` text component (m-protocol, module 1141) with `title`/`content` inside `client-only`.

m-lang-main.1430.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-main.1430.js> · chunk ...

Nuxt page component for the mobile route `m-lang-company-fund` (layout `empty`), the company fund-settlement notice page. In `asyncData` it calls the CMS content API (module 1118) `getJpFund`, which fetches `/getContent` for info id `INFO\_ID\_CONFIG.FUND` in channel `CHANNEL\_ID\_CONFIG.PROTOCOL.JP\_FUND`, passing `sLangKey: store.state.lang`; when nothing is returned it redirects to `m-lang-main`, otherwise it exposes `title` and `content` (from `sTitle`/`sContent`) as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function shows the `protocol` text component (m-protocol, module 1141) with `title`/`content` inside `client-only`.

m-lang-main.1431.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-main.1431.js> · chunk 5...

Nuxt page component for the mobile route `m-lang-company-privacy` (layout `empty`), the privacy-policy page. In `asyncData` it calls the CMS content API (module 1118) `getPrivacy`, which fetches the `/getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.PRIVACY`, passing `sLangKey: store.state.lang`; when nothing is returned it redirects to `m-lang-main`, otherwise it exposes `title`, `content` and `pdfUrl` (from `sTitle`/`sContent`/`pdfUrl`) as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function shows, inside `client-only`, either a `protocol-pdf` (HoYoverse PDF viewer, module 1131, with `is-mob` = true and `pdf-url`) when `pdfUrl` is set, or the `protocol` text component (m-protocol, module 1141) with `title`/`content`.

m-lang-main.1432.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-main.1432.js> · chunk e...

Nuxt page component for the mobile route `m-lang-company-terms` (layout `empty`). In `asyncData` it calls the CMS content API (module 1118) `getUser` with `sLangKey: store.state.lang`, which fetches the `getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.TERMS`, redirects to `m-lang-main` when nothing is returned, and otherwise exposes `title`, `content` and `pdfUrl` as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function wraps either a `protocol-pdf` (HoYoverse PDF viewer, with `is-mob`) when `pdfUrl` is set, or the `protocol` text component (m-protocol, module 1141) with `title`/`content`, inside `client-only`.

m-lang-main.1433.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-main.1433.js> · chunk 6...

Nuxt page component for the mobile route `m-lang-company-terms2` (layout `empty`). In `asyncData` it calls the CMS content API (module 1118) `getTerms2` with `sLangKey: store.state.lang`, which fetches the `getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.TERMS2`, redirects to `m-lang-main` when nothing is returned, and otherwise exposes `title`, `content` and `pdfUrl` as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function wraps either a `protocol-pdf` (HoYoverse PDF viewer, with `is-mob`) when `pdfUrl` is set, or the `protocol` text component (m-protocol, module 1141) with `title`/`content`, inside `client-only`.

m-lang-main.1434.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-main.1434.js> · chunk 0...

Nuxt page component for the mobile route `m-lang-company-terms3` (layout `empty`). In `asyncData` it calls the CMS content API (module 1118) `getTerms3` with `sLangKey: store.state.lang`, which fetches the `getContentList` entry for channel `CHANNEL\_ID\_CONFIG.PROTOCOL.TERMS3`, redirects to `m-lang-main` when nothing is returned, and otherwise exposes `title`, `content` and `pdfUrl` as page data. `head()` sets the document title to the entry title plus the i18n `seoTitlePrefix`. The render function wraps either a `protocol-pdf` (HoYoverse PDF viewer, with `is-mob`) when `pdfUrl` is set, or the `protocol` text component (m-protocol, module 1141) with `title`/`content`, inside `client-only`.

m-lang-news.1435.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-news.1435.js> · chunk 7...

Nuxt page component for the mobile route `m-lang-news-public` (layout `m/default`), the gacha/public-notice article that embeds an external page. `asyncData` fetches the article via the news API (module 1124) `getDetail` with `iInfoId: GACHA\_ID`, `iChanId: CHANNEL\_ID\_CONFIG.NEWS.ALL` and `sLangKey: store.state.lang` (both from the app bundle, module 28), redirecting to `m-lang-news` if the request throws, and exposes it as `newsContent` (its title is also the `head()` title). The render shows `m-news-detail` (class `fromGame` when `\$route.query.nolandscape` and `fromGame` are set) with an `m-news-detail\_\_article` title and a client-only `iframe` pointing at `gachaUrl?lang=<store.state.lang>`, whose height tracks `frameHeight` (+50px) updated from `window` `message` events of type `sendHeight` (listener added on mount, removed before destroy). A `nuxt-link` footer (`m-news-detail\_\_foot`, i18n `textBack`) returns to `m-lang-news` and tracks `news\_back` via `\$trackButton`.

B.55 m-lang-video

m-lang-video.1419.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-video.1419.js> · chunk ...

Nuxt page component `m-index` for the mobile home route `m-lang-main` (layout `m/default`), bundled with its inline section components: the KV (`m-home-kv`, plays the `youtubeUrl` PV in `videoDialog` via `\$openDialog` while committing `muteBgm`, tracking `AppointPage\_PV\_start/stop`), the video section (`m-home-video`, swiper of `videoRes` covers with prev/next, category label from `getCateDisplayName`, `learnMore` link to `m-lang-video`), the character section (`m-home-character`, thumb + fade swipers, camp info from the `characterCamps` getter or `getCampList` -> `setCharacterCamps`, `learnMore` to `m-lang-character`), the news slider (`m-home-news`, autoplaying looped swiper with `swiper-pagination-index-N` bullets and a scrolling summary), the feature section (`m-home-feature`, fade swiper with `feat-swiper-button-\*`) and the world section (`m-home-world`, banners linking to `m-lang-world` plus the i18n `conceptLink` concept-video card), and an `m-preregister` floating bar with download / cloud-download buttons (`\$downloadIns.download()`, `\$mJump` to the iOS/Android cloud link, `\$trackEvent`). The page's `asyncData` fetches in parallel `getKV`/`getFeature` (module 1164), `getSliderNews` (1124), `getAllCharacter` (1154), `getWorldList` (1152), `getHomeVideoList` and `getCates` (1153), commits `setVideoCates`/`setVideoMainChanName`, filters out `news-self-path` news (max 6) and returns `kvRes`, `newsRes`, `characterRes`, `featureRes`, `worldRes` and `videoRes`. It renders `section-index/character/video/news/world/feature` blocks with `fill` decoration static renders, keeps `isLoading` bound to the store (`setLoading`), positions the pre-register bar from scroll/resize, registers `\$gsap` ScrollTrigger timelines that `\$trackEvent('Page','enter')` per `.section`, and `slideTo` scrolls to a section using the nav config from HoYoverse mi18n (module 49).

m-lang-video.1425.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-lang-video.1425.js> · chunk f...

Nuxt page component `m-lang-video` for the mobile video-list route (layout `m/default`). `asyncData` uses the video API (module 1153) to fetch the category tree (`getCates`, `/getChildTree` under `CHANNEL\_ID\_CONFIG.VIDEO.ALL`) and the first page of 8 videos (`getAllVideos`) for `query.category` (default `VIDEO.ALL`), logs both responses, commits the child categories with the `setVideoCates` mutation and returns `cates` (root + reversed children with a `sChanName`), `videoList` and `total` pages; `\$route.query.category` changes re-run `renderPage`. It renders the mobile `pageTab` (nav-num 3), a `m-video-slider\_\_title` (i18n `navVideoLabel`), a horizontally scrolling `m-video-tab` of `nuxt-link` category tabs (`/m/<lang>/video?category=...`, keeping `shareType`, tracked as `navigation\_videos`) whose active tab is scrolled into view with jQuery `animate({scrollLeft})`, a `m-video-list` of cover/title/date items that open the `videoDialog` (module 1157) via `\$openDialog` with a YouTube iframe or `videoUrl` source (tracked as `video\_pics`), a `mihoyo-pager-rich` pager (module 1174) whose `go` event calls `renderPage` (re-fetch with `cache: true` and scroll to the list), and a `back-top` link (i18n `textBackTop`) that animates `html,body` to the top.

```

B.57 m-news

m-news.1415.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-news.1415.js> · chunk f87ccae · ...

Nuxt page component `m-news` for the mobile news-list route `m-lang-news` (layout `m/default`). `asyncData` restores the list from `store.state.newsCache.mNews` when a cached `newsIndex` exists, otherwise loads the news category tree (`getCates`, `/getChildTree` under `CHANNEL\_ID\_CONFIG.NEWS.ALL`) and the first 10 items (`getAllNews`, honoring the `blockGachaAnnounce` getter) from the news API (module 1124), commits `setNewsCates` and returns `cates`, `cateChan`, `newsList`, `total` and `hasMore`; `mounted` consumes the cache (`setNewsCache` reset) and jQuery-scrolls back to the previously clicked `.m-news-list\_\_item`. It renders the mobile `pageTab` (nav-num 4), a `m-news-slider\_\_title` (i18n `nav3Label`), a `m-news-tab` of `nuxt-link` category tabs (`/m/<lang>/news?category=...`, keeping `shareType`) with a sliding `m-news-tab\_\_thumb`, and a `m-news-list` of banner/date/news-tag/title/summary links to `m-lang-news-id` (or a `news-self-path` route) whose click (`handlePicClick`) stores the list in `setNewsCache` and tracks `news\_pics`; the `m-news-foot` shows a `load-more` button (`handleMore` -> `getList` appends the next page, i18n `loadMore`/`loadTxt`) or `no-more` with a `back-top` that animates `html,body` to the top. Category query changes call `reload`.

B.58 m-protocol

m-protocol.1141.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-protocol.1141.js> · chunk f5b...

m-protocol Vue component: the mobile layout for legal/protocol pages. It uses headerBar (module 349) and footerBar (module 203), takes props content and title, and computes fromGame from \$route.query.nolandscape && \$route.query.fromGame. It renders div.page-protocol with <header-bar>, div.m-web-protocol (fromGame class) > .m-web-protocol-container > .m-web-protocol__article holding .m-web-protocol__title, a .m-web-protocol__info breadcrumb (i18n gameName > title) and .m-web-protocol__content via innerHTML, then <footer-bar>. Normalised with componentNormalizer (module 36); styles from module 1132.

```

B.59 m-world

m-world.1426.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/m-world.1426.js> · chunk b262029 · ...

Nuxt page component `m-world` for the mobile world-archive route `m-lang-world` (layout `m/default`). `asyncData` loads entries via the world API (module 1152) `getWorldList` (channel `CHANNEL\_ID\_CONFIG.WORLD`) with `sLangKey: store.state.lang`, redirects to `m-lang-main` when the list is empty, and returns `worldList` plus the `activeIndex` matching `params.worldId`. It renders the mobile `pageTab` (nav-num 5), a static "back / ground" `m-world\_\_title`, and a client-only looped vue-awesome-swiper coverflow (ref `worldSwiper`, centered `auto` slides, `swiper-button-next/prev`) whose `progress` handler applies `translateX(...rem) scale(...)` and opacity per slide, `transitionStart` re-stacks z-indexes, `transitionEnd` stores `activeIndex`/`swiperIndex`, and `click` on the active slide calls `gotoDetail`; each `m-world\_\_slide` shows a cover with `name-en`/`name` (hidden when `isEN`), `cover-summary` and a `m-world\_\_slide-tape`. `gotoDetail` plays the `isClickAnim` animation, waits via `asyncTimeout`, then routes to `m-lang-world-id` and tracks `file\_card` via `\$trackButton` (`handleNavigatorUpload` tracks `file\_next`); `head()` uses `i18n` `nav5` + `seoTitlePrefix`.

B.60 @me-toast-library

me-toast-library.534.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/me-toast-library.534.js> · ch...

Bundled `@me/toast` library (UMD factory called with webpack exports, core-js-pure/Babel runtime helpers, Vue and a shared utils module providing `IS\_MOB` and `setTimeout`). It defines the `Toast` Vue component (props `duration`, `message`, `showContent`, `zIndex`, `opacity`, `isLoading`, `setInnerHTML`, `blockEvent`, `el`) rendering `.me-toast` with `me-toast\_m`/`\_\_pc`/`\_\_pc\_2k` and `\_\_enter`/`\_\_leave` modifiers, a loading `.me-toast-content\_\_loading` block with an SVG `.me-toast\_\_spinner`, or a `transition-group` of `.me-toast-content\_\_toast` messages (`.me-toast-message`) that auto-remove after their duration; its scoped CSS (`.data-v-634288c8\_0`) is injected by an embedded style injector and `normalizeComponent`. A singleton toast manager mounts instances via `Vue.extend` into `document.body` or a given element and exposes `Toast(msg|options)` with `.loading`, `.clear`, `.allowToastMultiple` and `.disableToastMultiple`; the default export is a plugin whose `install(Vue, commonOptions)` sets `Vue.prototype.\$mtoast`.

```
1  /**
2   * @me-toast-library – readable reconstruction of webpack module 534 (chunk belf69b.js)
3   * Original: https://zenless.hoyoverse.com/_nuxt/belf69b.js
4   *
5   * Bundled `@me/toast` library (UMD factory called with webpack exports, core-js-pure/Babel runtime helpers, Vue and a shared utils module providing `IS_MOB` and `setTimeout`). It defines the `Toast` Vue component (props `duration`, `message`, `showContent`, `zIndex`, `opacity`, `isLoading`, `setInnerHTML`, `blockEvent`, `el`) rendering `.me-toast` with `me-toast_m`/`__pc`/`__pc_2k` and `__enter`/`__leave` modifiers, a loading `.me-toast-content__loading` block with an SVG `.me-toast__spinner`, or a `transition-group` of `.me-toast-content__toast` messages (`.me-toast-message`) that auto-remove after their duration; its scoped CSS (`.data-v-634288c8_0`) is injected by an embedded style injector and `normalizeComponent`. A singleton toast manager mounts instances via `Vue.extend` into `document.body` or a given element and exposes `Toast(msg|options)` with `.loading`, `.clear`, `.allowToastMultiple` and `.disableToastMultiple`; the default export is a plugin whose `install(Vue, commonOptions)` sets `Vue.prototype.$mtoast`.
6   *
7   * Exports (minified key → meaning):
8   *   Toast → the toast function (showToast) with loading/clear/allowToastMultiple/disableToastMultiple helpers
9   *   default → the Vue plugin { install } that registers $mtoast
10  *
11  * Identifiers were renamed scope-aware from the minified bundle; values, strings, class names and control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md.

B.61 mhy-copy-input-clipboard-helper

mhy-copy-input-clipboard-helper.535.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/mhy-copy-...>

Bundled `mhy-copy-input` clipboard helper (a self-contained webpack bundle with its own module runtime). Its default export `clipboard({ text, onSuccess, onFail })` creates a temporary read-only `input.mhy-copy-input` (font-size 14px) holding the text, selects it, runs `document.execCommand('copy')` (throwing when `queryCommandSupported('copy')` is false), removes the input and calls `onSuccess` or `onFail`; its `install(Vue)` method sets `Vue.prototype.\$clipboard`.

B.62 mi-ho-yo-pager-rich

mi-ho-yo-pager-rich.1174.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/mi-ho-yo-pager-rich.11...>

mi-ho-yo-pager-rich Vue component (rich pagination). Props `totalPage`, `showItems` (5), `showPrev/showNext/showJump`, `initPage`, `mode` ("event" | "query" | "params"), `routeName` (required for params mode, else created throws), `prevText/nextText` (上一页/下一页), `totalText`, `jumpText`, `pagerClass` and `simpleStyle`; data `currentPage/jumpPage` and a computed pages window around the current page. `go(page)` clamps to `1..totalPage` and then updates `$route.query.page` or `$route.params.page` via `$router.go`, or emits "go". It renders `div.mihoyo-pager-rich` with `__pages` (prev/next links with --simple variants, first/last `__button`, `__ellipsis` markers, page buttons with `__current`) and, unless `simpleStyle`, a `__jump` block (`__text`, `__total`, number `__input` bound to `jumpPage`, `__go` button). Normalised with `componentNormalizer` (module 36); styles from module 1169.

B.63 news-CMS-API

news-CMS-API.1124.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/news-CMS-API.1124.js> · chun...

News CMS API helpers. `formatNews` parses each item's `sExt` JSON and maps `sExt["news-banner"][0].url` to `banner`, `sTitle/sIntro/iInfoId` to `title/summary/id`, and formats `dtStartTime` with `date-fns` format (module 1151) using the `i18n` word `"dateFormat"` (`$getI18nWord`). `getList/getAllNews/getSliderNews` call the `user-model get` (module 1117) on `appBundle.apiBase + "/getContentList"` with channel `CHANNEL_ID_CONFIG.NEWS.ALL` (page sizes 20/9/7), optionally dropping items flagged `sExt["news-self-path"]` and trimming to the page size; `getDetail` calls `"/getContent"` with `iAround: 1` and exposes `sContent` as `content`; `getCates` calls `"/getChildTree"` and builds `arrList` (first 4 children, ensuring an `ALL` entry named `sChanName`) and `objList` keyed by `iChanId`.

```

B.64 news-tag

news-tag.1163.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/news-tag.1163.js> · chunk f87ccae · ...

news-tag Vue component. Props channel (Number|String) and mob; computed newsCates from the store getter newsCates, currentChannel (the cate whose iChanId equals channel) and a fixed color "#BFDB5A". On created, if no categories are cached it runs getCates, an async (asyncToGenerator, module 32 + regeneratorRuntime) call to the news API getCates (module 1124) with sLangKey from store state.lang, committing arrList[0].children via the "setNewsCates" mutation. It renders div.news-tag (mobile class when mob) showing the current channel's sChanName. Normalised with componentNormalizer (module 36); styles from module 1159.

B.65 news

news.1416.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/news.1416.js> · chunk ba4082a · 621 li...

Nuxt page component `news` for the desktop news-list route `lang-news`. `asyncData` reads the cached `newsCache.pageIndex` (then resets it with `setNewsCache`) and loads, via the news API (module 1124), the slider news (`getSliderNews`), the category tree (`getCates`, `/getChildTree` under `CHANNEL\_ID\_CONFIG.NEWS.ALL`) and a 9-item page of `getAllNews` for `query.category`, all honoring the `blockGachaAnnounce` getter; it commits `setNewsCates` and returns `latestNewsList` (first 6), `cates`, `initPage`, `newsList` and `total`. It renders the desktop `pageTab` (nav-num 4), a `news-slider` (i18n `nav3Label`) that shows the latest news as a plain list when fewer than 3 or as a looped vue-awesome-swiper (ref `mySwiper`) with custom `swiper-pagination-index-N` bullets whose clicks are tracked as `news\_point`, a `news-wrap` with `news-tab` category links (`<lang>/news?category=...`), a `news-list` of banner/date/news-tag/title/summary items linking to `lang-news-id` (or a `news-self-path` route) and a `mihoyo-pager-rich` pager (module 1174) whose `go` calls `renderPage`. `handlePicClick` saves `pageIndex`/`newsIndex` with `setNewsCache` and tracks `news\_pics`; `mounted` jQuery-scrolls back to the list when returning from an article, and `renderPage` re-fetches (`cache: true`) and scrolls to `news-wrap`.

B.66 NoSsr-functional-component

NoSsr-functional-component.168.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/NoSsr-function...>

The ``NoSsr`` functional Vue component (from the `vue-NoSsr` package used by Nuxt). Until its parent is mounted it renders either a placeholder element (tag from the ``placeholderTag`` prop, default ``div``, with class ``.no-ssr-placeholder``, content from the ``placeholder`` prop or the ``placeholder`` slot) or empty comment nodes; it registers a one-time ``hook:mounted`` listener on the parent that calls ``$forceUpdate()``, after which the default slot content is rendered client-side.

```

B.68 nuxt-language-middleware

nuxt-language-middleware.584.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/nuxt-language-...>

Nuxt route middleware for language handling. It normalises `params.lang` via module 83's helper, commits the store mutation `"setLang"`, and when the `lang` is in the supported list (module 49 .d) either initialises `@mihoyo i18n` (`setCommonConfig/initAppI18n` with `appId "m03111446031031"`, `gameBiz "nap_global"`, `zone "morax"`, `env` from `appBundle.i18nEnv`) on static builds or calls `setLang` at runtime. For an unsupported `lang` it redirects to a `lang`-prefixed path, or resolves a named route with `lang/query` and either redirects to it or (for the special route name module 49 .c) hard-navigates `window.location` after 200 ms.

```

B.71 protocol-CMS-API

protocol-CMS-API.1118.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/protocol-CMS-API.1118.js> ...

CMS protocol API helpers for legal/policy pages. Each method builds query params from a base {iPageSize: 1, iPage: 1, isPreview (1 in development/test/prerelease)} plus a channel id from appBundle.CHANNEL_ID_CONFIG.PROTOCOL (PRIVACY, TERMS, TERMS2, TERMS3, HISTORY, JP_FUND) and calls the user-model get (module 1117) on appBundle.apiBase + "/getContentList" (getPrivacy, getUser, getTerms2, getTerms3, getKrHistory) or "/getContent" with iInfoId from INFO_ID_CONFIG.FUND/ABOUT (getJpFund, getJpAbout), resolving the first item. formatProtocol parses each item's sExt JSON string and copies sExt.link_pdf to pdfUrl.

B.74 qs-parse

qs-parse.629.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/qs-parse.629.js> · chunk belf69b · ...

Vendored qs library parse implementation (qs/lib/parse). It splits a query string by delimiter (respecting parameterLimit, ignoreQueryPrefix and utf8 charset sentinels), decodes keys/values with the configured decoder, handles comma lists, interpretNumericEntities and [] suffixes, then expands bracket/dot keys into nested objects/arrays up to depth and arrayLimit while guarding prototype keys. Results are merged and compacted with qs utils (module 398).

B.75 qs-stringify

qs-stringify.619.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/qs-stringify.619.js> · chunk belf69b...

Vendored qs library stringify implementation (qs/lib/stringify). It serialises an object into a query string, supporting arrayFormat brackets/comma/indices/repeat, allowDots, encode/encodeValuesOnly with a custom encoder, filter, sort, skipNulls, strictNullHandling, serializeDate, RFC formats (module 292) and utf-8/iso-8859-1 charset sentinels. Cyclic references are detected with side-channel maps (module 620) and throw RangeError("Cyclic object value"); encoding/merging helpers come from qs utils (module 398).

B.77 rem---device

rem---device.326.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/rem---device.326.js> · chunk 8c4c...

Nuxt client plugin that sets up responsive rem scaling (a lib-flexible variant) and device detection. It reads device info from a device-utils module (``getDeviceType`, `ios`, `android`, `samsungTablet`, `getOrient``), adds a ``mo`` or ``pc`` class to ``<html>``, and computes the root font-size from ``clientWidth`` against a design width (750x1334 for mobile with landscape handling, 2560 with min-scale 1440 for PC), correcting for older Android Chrome (<79) font-size clamping, recalculating on ``resize`/`pageshow``, adding a ``hairlines`` class on high-DPR screens, and revealing ``#__nuxt``. It injects ``$flex`` (a getter for ``rem``, ``deviceType`/`device``, ``clientType``, ``pc``, ``mobile`/`mo``, ``samsungTablet``) and ``$qs`` (the qs library).

B.79 router-plugin

router-plugin.344.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/router-plugin.344.js> · chunk ...

Nuxt router plugin. It registers a pass-through ``router.beforeEach`` guard and a ``router.afterEach`` hook that computes which query keys changed between the previous and current route (lodash-style difference/intersection helpers); unless the path is unchanged and only ``webpush*`` keys changed, it sends a pageview with ``window.mhyAna.trackPageview({ path, name })`` and rewrites the browser URL via ``history.replaceState``, stripping all ``webpush*`` query parameters using the ``qs`/`addParamsToUrl`` utilities.

```

B.82 show

show.1044.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/show.1044.js> · chunk be1f69b · 262 li...

AccountPopup Vue component from the HoYoverse account SDK, bundled with the vue-runtime-helpers normalizeComponent helper. Props: round, duration, position (default "center"), overlay, closeOnClickOverlay, closeOnPopstate, visible, overlayClass; computed isCenter, mainClass (account-popup-round / account-popup--<position>), transitionName (account-popup-fade or account-popup-slide-<position>) and mainStyle (animation/transition duration). It renders a v-show div.account-popup--overlay wrapping a <transition> and div.account-popup with the default slot, emits click, update:visible (overlay click / popstate), opened and closed, and listens to window popstate when closeOnPopstate is set.

```

show.134.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/show.134.js> · chunk 8c4c131 · 186 line...

Nuxt error page component (uses the ``errorLayout`` layout) that receives an ``error`` prop (default `statusCode 500`). It renders ``error`` with either an ``error__404`` block or an ``error__500`` block, each showing an illustration image, `i18n` texts (``error404`/`error404Sub`` or ``error502`/`error502Sub`` via ``$getI18nWord``) in ``error__text-main`/`error__text-sub``, and an ``error__btn`` "back home" button (hidden when already on ``lang-main`/`m-lang-main``) whose ``handleBack`` method pushes the ``m-lang-main`` or ``lang-main`` route depending on ``$isMob``.

```

Nuxt page component for the mobile world-entry detail route ``m-lang-world-id`` (layout ``m/default``, ``scrollToTop``). ``validate`` only accepts numeric ``params.id``; ``asyncData`` loads the entry via the world API (module 1152) ``getDetail`` (``getContent``, channel ``CHANNEL_ID_CONFIG.WORLD``) with ``iInfoId: params.id`` and ``sLangKey: store.state.lang``, raising a Nuxt 404 ``error`` on failure, and exposes it as ``worldContent`` (its ``sTitle`` plus `i18n`seoTitlePrefix`` is the ``head()`` title). It renders ``m-world-detail`` with the mobile ``pageTab`` (nav-num 5), a static "back / ground" ``m-world-detail__title``, a ``scaleIn`` transition around a client-only vue-awesome-swiper (ref ``worldSwiper``, centered ``auto`` slides with ``autoHeight`` and ``.swiper-pagination``, shown when ``worldContent.banner`` has more than one item) of ``bannerM`` images whose click calls ``gotoDetail``, then the entry name, HTML ``sContent`` and a ``nuxt-link`` (`i18n`textClose``) back to ``m-lang-world`` with ``params.worldId``.

Bundled `@me/audio` library (UMD factory called with webpack exports and core-js-pure/Babel runtime helpers, howler, a shared utils module and Vue). It defines an `AudioPlayer` class wrapping `Howl` instances (multi-src index switching, sprites, fade in/out, volume change, play/pause/stop/unload, play state cached in `storage` under `storageKey` default `@me/audio`, pause on page `visibilitychange`, and an html5 first-click autoplay unlock with iOS 15 detection) and the `MeAudio` Vue component (props `src`, `effectSrc`, `effectConfig`, `index`, `loop`, `icon`/`activeIcon`/`hoverIcon`, `volume`, `autoplay`, `preload`, `fade`, `doPlay`, `html5`, `cache`, `storageKey`) that renders `.m-audio-player` with `.m-audio-player__icon` (`--hover`, `--active`) images, emits `tap`/`played`/`end`, and exposes `Vue.prototype.$effectPlayer` for sound effects. It includes the vue-runtime-helpers `normalizeComponent` and a browser style injector for its scoped CSS (`data-v-201c2d6f_0`).

```

B.86 sidebar

sidebar.1418.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/sidebar.1418.js> · chunk 3b23566 · 35...

Nuxt page component `index` for the desktop home route `lang-main` (layout `default`), bundled with its inline children: the `sidebar` section pager (prev/next and `0N` numbers from the HoYoverse mi18n nav config `Navs`, translateY by a measured nav height, emits `toSection`), a `cloud-download-dialog` (QR code and Windows/macOS cloud-download buttons via `\$mJump`, `popup\_download` events), the KV (`home-kv`, extends `base`; PV playback in `videoDialog` with `muteBgm`, PC download via `addParamsToUrl(pc\_download\_link)` + `\$ads` FB/Twitter tracking, Steam wishlist link, `sea-download-layout` platform buttons using `window.MeSeaDownload.getDownloadMi18n` for `layer\_tag`, cloud download, and an optional Firebase web-push subscribe button using `initializeApp`/messaging `getToken` with a VAPID key and the `webpush\_subscribe` storage flag), the character section (`home-character`, thumb + fade swipers, sliding English-name marquee via `\$gsap`, camps from the `characterCamps` getter or `getCampList` -> `setCharacterCamps`), the news slider (`home-news`), feature (`home-feature`), world (`home-world` with the concept-video card) and video (`home-video`, fade swiper with a translating thumbnail nav, throttled prev/next and debounced resize) sections. The page's `asyncData` fetches `getKV`/`getFeature` (module 1164), `getSliderNews` (1124), `getAllCharacter` (1154), `getWorldList` (1152), `getHomeVideoList` and `getCates` (1153), commits `setVideoCates`/`setVideoMainChanName`, keeps up to 6 non-`news-self-path` news and returns `kvRes`, `newsRes`, `characterRes`, `featureRes`, `worldRes` and `videoRes`. It renders `section-index/character/video/news/world/feature` blocks with `fill` decorations, tracks the active section from scroll (`setHomeSection`, `\$trackEvent('Page','enter')`), restores `homeScroll` / saves it with `setHomeScroll`, scrolls between sections with `\$gsap` `scrollTo`, and registers per-section `\$gsap` ScrollTrigger timelines that slide in `.section-nav-\*` labels and animate mi18n-configured attributes.

3   * Original: https://zenless.hoyoverse.com/\_nuxt/8c4c131.js
4   *
5   * Build-time environment configuration module (ES module with named exports). It defines the pr
6   oduction/sea environment flags, the HoYoverse API base URLs (content_v2_user static content AP
7   I, the e20220610reserve event API, sg-public-api IP API, account management site), the gacha p
8   robability page URL and GACHA_ID 123483, the landing URL https://zenless.hoyoverse.com, the co
9   ntent CHANNEL_ID_CONFIG map (social follow 292, KV 285, news 288/295/296/297, protocol pages 2
10  94/293/303/305/789/836, character camp 286 / character 287, feature 289, world 290, video 1332
11  /1337), INFO_ID_CONFIG (FUND 123774, ABOUT 123763) and the account SDK app id.
12  *
13  * Exports (minified key → meaning):
14  *   environment → build environment name ("production")
15  *   i18nEnv → i18n region environment ("sea")
16  *   isSea → boolean flag that this is the overseas (sea) build
17  *   apiBase → content_v2_user static content API base URL
18  *   normalBase → e20220610reserve event API base URL
19  *   accountMangementUrl → HoYoverse account management site URL
20  *   ipApiBase → sg-public-api base URL used for IP/region lookups
21  *   gachaUrl → gacha probability static page URL
22  *   GACHA_ID → content id of the gacha probability entry
23  *   LANDING_URL → official site landing URL
24  *   CHANNEL_ID_CONFIG → map of content channel ids (social, KV, news, protocol, character, feat
25  ure, world, video)
26  *   INFO_ID_CONFIG → map of single content info ids (FUND, ABOUT)
27  *   accountSdkAppId → HoYoverse account SDK app id
28  *
29  * Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
30  nd
31  * control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
32  *

B.89 sync-request-browser-XHR

sync-request-browser-XHR.397.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/sync-request-bro...>

Browser implementation of the `sync-request` library. It exports a `doRequest(method, url, options)` function that validates its arguments, appends `options.qs` via a query-string helper (module 618), sets `X-Requested-With: XMLHttpRequest` for same-origin requests, serializes `options.json` (with `content-type: application/json`) or `options.form` as the body, performs a synchronous `XMLHttpRequest`, parses the raw response headers and returns an http-response-object (module 630) with status, headers, body text and URL. It also re-exports the global `FormData`.

```

B.93 user-model-loading-overlay

user-model-loading-overlay.1245.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/user-model-l...>

User-model loading overlay. Requires its stylesheet (module 1246) and, when not in SSR and `#miHoYoUserModelLoading` is absent, appends a div containing the HTML template from module 1248 to `document.body`. Exports `show(text = "数据加载中")` which sets `#miHoYoUserModelLoadingText` `innerText` and displays `#miHoYoUserModelLoading` as block, and `hide()` which sets `display` none; both are no-ops under `userModelUtils.isSSR`.

```

B.98 user-model-request

user-model-request.1117.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/user-model-request.11...>

User-model HTTP request layer. It exports get/post/put/del, each calling a shared request(method, url, options, formatParams, formatResult) that normalises options (data, preParams, cache, loading, success, error, download, response), adds isPreview/prerelease/timestamp in the "prerelease" environment, forwards authkey query params, serves GET responses from the response cache (module 1240) or merges duplicate in-flight GETs (module 1241), and otherwise calls axios (module 114, or nuxtContext.\$axios from module 500 when appBundle.axiosType is "nuxt") with baseURL appBundle.apiBase. It manages a global loading overlay via a memory Store counter (isRequestingCount / hideDefaultLoadingTimer, module 1176) and the defaults facade (module 1244), shows success/warn/error messages, treats retcode -100 (not logged in) and -403 (no permission) specially, and supports download via module 1243; it also exports identity defaultFormatParams/formatParams/formatResult/defaultFormatResult and requestIsSucc.

```
1  /**
2   * user-model-request – readable reconstruction of webpack module 1117 (chunk fd57a96.js)
3   * Original: https://zenless.hoyoverse.com/_nuxt/fd57a96.js
4   *
5   * User-model HTTP request layer. It exports get/post/put/del, each calling a shared request(met
6   hod, url, options, formatParams, formatResult) that normalises options (data, preParams, cache
7   , loading, success, error, download, response), adds isPreview/prerelease/timestamp in the "pr
8   erelease" environment, forwards authkey query params, serves GET responses from the response c
9   ache (module 1240) or merges duplicate in-flight GETs (module 1241), and otherwise calls axios
10  (module 114, or nuxtContext.$axios from module 500 when appBundle.axiosType is "nuxt") with b
11  aseURL appBundle.apiBase. It manages a global loading overlay via a memory Store counter (isRe
12  questingCount / hideDefaultLoadingTimer, module 1176) and the defaults facade (module 1244), s
13  hows success/warn/error messages, treats retcode -100 (not logged in) and -403 (no permission)
14  specially, and supports download via module 1243; it also exports identity defaultFormatParam
15  s/formatParams/formatResult/defaultFormatResult and requestIsSucc.
16  *
17  * Exports (minified key → meaning):
18  *   default → { defaults } – the user-model request defaults/message facade (module 1244)
19  *   get → get(url, options, formatParams, formatResult) -> Promise
20  *   post → post(url, options, formatParams, formatResult) -> Promise
21  *   put → put(url, options, formatParams, formatResult) -> Promise
22  *   del → del(url, options, formatParams, formatResult) -> Promise (DELETE)
23  *   requestIsSucc → isSuccessResponse check from the defaults facade
24  *   defaultFormatParams → identity params formatter
25  *   formatParams → identity params formatter
26  *   formatResult → identity result formatter
27  *   defaultFormatResult → identity result formatter
28  *
29  * Identifiers were renamed scope-aware from the minified bundle; values, strings, class names a
30  nd
31  * control flow are unchanged. Library aliases resolve to the module map in source/MODULE-MAP.md
32  .

B.100 v-click-outside-directive

v-click-outside-directive.254.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/v-click-outside-direc...>

Bundled `v-click-outside` library (CommonJS export of an IIFE). It defines a `click-outside` Vue directive that, on bind, normalizes the binding value (function or `{handler, middleware, events, isActive, detectIframe, capture}`), attaches `touchstart` or `click` listeners on `document.documentElement` that call the handler when the event path does not contain the element, optionally adds a `window` blur listener that fires when focus moves into an `IFRAME` outside the element, stores the listeners on `el['\_\_v-click-outside']`, re-binds on value change in `update`, and removes them on `unbind`. It exports `{ install(Vue), directive }`.

```

B.101 video-CMS-API

video-CMS-API.1153.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/video-CMS-API.1153.js> · c...

Video CMS API helpers. `formatVideo` parses each item's `sExt` JSON and maps `video-cover[0].url`, `video-inner-cover[0].url`, `video-url` (asset url or raw string), `video-youtube`, `sChanName`, `sTitle` and `iInfoId` onto `cover`, `innerCover`, `videoUrl`, `youtubeUrl`, `cateName`, `title` and `id`, with dates formatted by `date-fns` format (module 1151) as `YYYY-MM-DD` and `MM/DD/YYYY`.

`getList/getAllVideos/getHomeVideoList/getSliderVideos` call the user-model `get` (module 1117) on `appBundle.apiBase + "/getContentList"` for channel `CHANNEL_ID_CONFIG.VIDEO.ALL` (page sizes 20/9/9/6); `getCates` calls `"/getChildTree"` and sets `mainChanName/arrList`. `isBlankVideoChan` compares against `CHANNEL_ID_CONFIG.VIDEO.BLANK`, `parseCatesFromRes` builds `{allCate, children, tabCates}` (named, non-blank channels, using `toConsumableArray` from module 1150) and `getCateDisplayName` resolves a channel's `sChanName` with a fallback for the blank channel.

```

B.103 video-page

video-page.1421.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/video-page.1421.js> · chunk 68...

Nuxt page component "video-page" for the non-localized /video route. Its only logic is a middleware that reads redirect and query from the Nuxt context and redirects to the named route "lang-video" with `params.lang = store.state.lang`, preserving the query. The render function outputs an empty div. Compiled with the vendor `normalizeComponent` helper (module 36).

```

B.104 video-tag

video-tag.1420.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/video-tag.1420.js> · chunk 53d09dd...

Desktop video-list page for the route `lang-video` (component name `lang-video`, layout `default`), bundled with an inline `video-tag` child component. `video-tag` takes a `channel` prop and shows a `video-tag\_\_text` label from the video API (module 1153) `getCateDisplayName`, using the `videoCates`/`videoMainChanName` getters and, when they are empty, fetching `getCates` and committing `setVideoCates`/`setVideoMainChanName`. The page's `asyncData` loads `getSliderVideos`, `getCates` and a 9-item `getAllVideos` page for `query.category` (default `CHANNEL\_ID\_CONFIG.VIDEO.ALL`), commits the parsed categories and returns `latestVideoList` (first 6), `cates` (`tabCates`), `videoList` and `total`. It renders the desktop `pageTab` (nav-num 3), a `video-slider` (i18n `navVideoLabel`) with the latest videos as a list (fewer than 3) or a looped vue-awesome-swiper (ref `mySwiper`) with `swiper-pagination-index-N` bullets tracked as `video\_point`, a `video-wrap` of `video-tab` category links (`<lang>/video?category=...`, keeping `shareType`, tracked as `navigation\_videos`), a `video-list` of cover/date/video-tag/title items and a `mihoyo-pager-rich` pager (module 1174) driving `renderPage` (re-fetch with `cache: true`, jQuery scroll to `.video-wrap`). Clicking a video calls `openPlayer`, which opens `videoDialog` (module 1157) via `\$openDialog` with a YouTube iframe or `videoUrl` source and tracks `video\_pics`.

```

B.105 vue-style-loader-addStylesClient

vue-style-loader-addStylesClient.55.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/vue-style-lo...>

vue-style-loader's client-side style injector ('addStylesClient'). It converts css-loader module lists into style records keyed by id, injects '<style>' elements into 'document.head' (reusing server-rendered tags marked with the 'data-vue-ssr-id' attribute), reference-counts styles for hot updates/removal, appends source maps as base64 'sourceMappingURL' comments, and falls back to a single shared style tag with 'styleSheet.cssText' replacement for old IE (msie 6-9). It throws if used outside a browser when DEBUG is set.

world.1441.js · <https://sitedna.zenlesszonezero.calyndrae.com/source/readable/world.1441.js> · chunk 1e69d9d · 434 li...

Nuxt page component `world` for the desktop world-archive route `lang-world`. `asyncData` loads entries via the world API (module 1152) `getWorldList` (channel `CHANNEL\_ID\_CONFIG.WORLD`) with `sLangKey: store.state.lang`, redirects to `lang-main` when the list is empty, and returns `worldList` plus the `activeIndex` matching `params.worldId`; `mounted` runs `initSwiper` (re-mounts the swiper at `initialSlide = activeIndex` and starts `isInitAnim`). It renders the desktop `pageTab` (nav-num 5) and a client-only looped vue-awesome-swiper coverflow (ref `worldSwiper`, no touch move, speed 800) whose `progress` handler applies `translateX(...rem) scale(...)/opacity` per slide, `transitionStart` re-stacks z-indexes when `dir` is `next`, `slideChange` stores `activeIndex`, and `click` on the active slide calls `gotoDetail`; each `world\_\_slide` shows a cover with `name-en`/`name` (data-lang, hidden when `isEN`), `cover-summary` and `world\_\_slide-tape`, plus `world\_\_navigation` prev/next buttons that set `dir` and track `file\_next`. `gotoDetail` plays the `isClickAnim` animation, waits via `asyncTimeout`, routes to `lang-world-id` and tracks `file\_card` via `\$trackButton`; `head()` uses i18n `nav5` + `seoTitlePrefix`.

Appendix C: Data archives and captures (hosted, not reprinted)

<https://sitedna.zenlesszonezero.calyndrae.com> · sizes as archived

The analysis and capture archives behind the chapters are large machine-readable files. Printing them would add thousands of pages without adding understanding, so they stay on the hosted site and are listed here with their sizes. Every link in the chapters that points at one of these files resolves to the same host.

Path	What it holds	Size	URL
analysis/css-rules.json	every CSS rule with its media context, component and source module	1.1 MB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/css-rules.json
analysis/colors.json	colour ladder with counts, properties and components	136 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/colors.json
analysis/typography.json	font-family / size / weight / line-height rules and the @font-face list	219 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/typography.json
analysis/spacing.json	spacing values	12 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/spacing.json
analysis/layers.json	z-index stack	29 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/layers.json
analysis/motion.json	transitions, keyframes and hover rules	117 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/motion.json
analysis/breakpoints.json	media queries	407 B	https://sitedna.zenlesszonezero.calyndrae.com/analysis/breakpoints.json
analysis/hover-states.json	measured hover diffs	114 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/hover-states.json
analysis/motion-timelines.json	measured entrance timelines	218 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/motion-timelines.json
analysis/components/	one JSON per CSS block: rules, markup, computed styles, hover, keyframes	2.2 MB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/components/
analysis/css-digest.md	every rule, one line each, grouped by block	724 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/css-digest.md
analysis/DNA.md	the written specification (tokens and rules)	8 KB	https://sitedna.zenlesszonezero.calyndrae.com/analysis/DNA.md
capture/interactions.json	everything the interactions chapter measured	36 KB	https://sitedna.zenlesszonezero.calyndrae.com/capture/interactions.json
capture/network-manifest.json	every response the depth-1 pages received, with URL, type, bytes and SHA-256	356 KB	https://sitedna.zenlesszonezero.calyndrae.com/capture/network-manifest.json
capture/css-components.json	block stylesheet map	68 KB	https://sitedna.zenlesszonezero.calyndrae.com/capture/css-components.json

Acknowledgements

Author: Calyndrae.

HoYoverse / COGNOSPHERE are acknowledged as the owners of the Zenless Zone Zero website that is the subject of this handbook: its design, markup, stylesheets, scripts, fonts, images and sounds. Their material is reproduced here for study of the site's construction only.

The site's own libraries are acknowledged with their maintainers: Vue, Nuxt, vue-router, Vuex, vue-meta, Swiper, GSAP, axios, lodash, date-fns, vant, pdf.js, vuescroll and Firebase. Credit for those tools belongs to their respective authors; their inclusion here does not imply that they endorse this handbook.

The handbook was produced with Node.js, Playwright and headless Chromium (capture, measurement and specimen rendering), prettier and Babel (beautifying, splitting and renaming), PostCSS (stylesheet analysis), poppler (page-text extraction for the contents and index) and ReportLab (this printed edition).

The page layout, beige front matter, body pages and acknowledgements treatment are adapted from the supplied template. Its publisher did not author, publish or endorse this handbook, and no mark of theirs appears in it.

Noto Serif is used for the serif text. The template's Lucida Sans could not be embedded beyond the subset of glyphs the template itself carries, so DejaVu Sans, the closest available humanist sans, takes its role for the title, headings, contents and footer. Code is set in DejaVu Sans Mono. Chinese text in the examples is set in Noto Sans CJK where the serif face has no glyph. Tables, lists, inline identifiers and code excerpts are typeset from the handbook's own content rather than shown as raw formatting syntax.
